

## ABSTRACT

### WHEN PUSH COMES TO SHOVE: AN EQUITY ANALYSIS OF A UNIFORM TAX RATE AND EQUALIZED ASSESSED VALUATION IN ILLINOIS

Susan L. Farrell, Ed.D.

Department of Leadership, Educational Psychology and Foundations

Northern Illinois University, 2014

Rosita Lopez, Director

The state of Illinois adopted a General State Aid per-pupil foundation level for the 2011-2012 school year of \$6,119. The legislature failed to allocate enough funding to provide the adopted level to school districts. This study examines three alternative methods of attaining the 2012 Illinois adopted foundation funding level for the 864 school districts in Illinois. The three methods explored are consolidating EAV at a county level and utilizing a uniform tax rate, moving to a state support program, and applying an operational tax rate to districts as they currently exist.

## ACKNOWLEDGEMENTS

I would like to express my appreciation to the members of my dissertation committee for their guidance and assistance. I would like to thank Dr. Rosita Lopez, chairperson, who was instrumental in forming the committee and, in essence, making this dissertation a reality. Hopefully, her ethics and belief in equity will be reflected throughout this dissertation. I will always be grateful to Dr. Cheryl Crates and Dr. Bradley Hawk for sharing their time, expertise in finance, and continual support throughout the process; their suggestions and contributions significantly improved the quality of this work.

I would be remiss not to acknowledge the administrators with whom I have worked directly in my career. These administrators shared their experience and knowledge with me and not only enlarged the scope of my knowledge, but modeled ethical leadership in its finest form. My sincere thanks to Dr. Cheryl Crates, Mr. John Prince, and Dr. John Harper.

I would also like to acknowledge the friends and colleagues throughout my university career who shared their thoughts and ideas with me and broadened my perspective – in particular Laurie Charles, Adam Ackmann, Mike Prombo, Donna Oberg, Mary Ann Brown, Lynn Gibson, and Alisha Liakopoulos.

Finally, my thanks to my two editors: Susan Richter, who edited and formatted this dissertation, and Dr. Christopher Bradley, who reviewed the mathematical calculations.

## DEDICATION

This dissertation is dedicated to my husband, Andrew, and my children, Morgan, Paul, and Alexander. My eternal thanks and love to my husband, Andrew, who has never failed to support me, encourage me, and who has read through this dissertation endless times and always with a positive mindset. My children, who, on a daily basis, have inspired and enriched my life, encourage me to want to be a better person tomorrow than I am today. I also want to acknowledge my parents, Walter and Leora Schultz, whose common-sense advice provided me a sound foundation in understanding finance.

## CHAPTER 1

### INTRODUCTION

Ideally education is about teaching and learning. The school and the community fit like a hand in a glove. Although this scenario is pleasant to contemplate, it describes a utopia that probably never existed and most certainly does not today (Owen & Burris, 2006, p. 1).

#### Background/Rationale

The study of educational finance is very complex. Its history is one that is based on multiple philosophies including democracy, community, education, and tax burdens.

Educational finance exists in a fluid state as it is impacted by the legislative processes and the current state of the economy.

#### Local Values and Funding

In 1647, the Massachusetts Bay Colony enacted the Old Deluder Satan Act.<sup>1</sup> The law required towns of 50 householders or more to employ a teacher to instruct reading and writing. The teacher's wages were to be paid by parents or by the general population (Cohen, 1974). The accepted philosophy and tradition of funding schools locally has become commonly accepted and remains much the same as it was in 1647. The school should reflect community values and educate children to become contributing members of society. As a

---

<sup>1</sup> Old Deluder Satan Act, Massachusetts School Law of 1648

successful student will benefit the whole community, the whole community should fund education. Most individuals would agree with the ideal of this philosophy.

If one considers the detail of 50 householders or more of the Old Deluder Satan Act,<sup>2</sup> it could be inferred that larger communities would have better education than smaller more rural communities at the time. Today, the opposite is true due to the population moving from city centers to suburban and more rural areas. This movement, as well as how communities are formed and developed, was not anticipated or considered in 1647. Communities and school districts have not been formed on a uniform basis either by the numbers of householders or the square miles that a community encompasses. Today's school districts vary greatly in size and organization. Illinois school districts have been organized to serve elementary students only, high school students only, or both (unit school district). Each of these organizational structures would have a radically different perception about the community it serves. Questions to consider are: What is an appropriate education? What comprises a community? These questions are both qualitative and quantitative in nature.

In the qualitative sense, individuals within a community may have drastically opposing opinions and values about what the educational process should look like. Today, American communities are becoming larger, more diverse, and, with the great strides in technology, are more globally connected with one another. Along with this diversity comes conflict, and conflict is never more apparent than when resources are scarce. Nowhere do the competing visions and values of education become clearer than in the quantitative arena of school finance. School finance has found itself mired in a paradox of values encompassing

---

<sup>2</sup> Id.

personal beliefs, family values, community wealth, taxation, economics, and state and federal statutes.

### Illinois Educational Funding

Since the early 1970s, one of the primary challenges to Illinois educational funding is based on equity. Per-pupil funding has been a long-term problem in Illinois. The National Center for Educational Statistics (NCES, 2013) found that for the 2005-2006 school year instructional spending per pupil in Illinois ranged from \$2,709 to \$11,784. This means that in the 2005-2006 school year, the wealthiest district was spending approximately four times more than the poorest district. The Illinois Local Education Agency Retrieval Network (ILEARN, n.d.) website shows that the per pupil expenditures for 2012 ranged between \$1,854 to \$25,069. The current range of per-pupil expenditures has widened in comparison to the 2005-2006 data. The inequity in funding can be traced directly to the sources of revenue.

Illinois schools have three sources of funding: federal, state, and local. In 2006, local funds contributed over 54% of Illinois school funding, state sources contributed 36%, and federal sources contributed 10% (Fitts, 2008, p. 1). In 2008, it was reported that local funds had risen to 62% of total revenue.

Local funds are primarily generated in the form of property taxes, which are based on the equalized assessed value (EAV) of property. Although property tax provides a stable and reliable source of income, the value of property within school districts' borders varies. This provides an inequitable base for taxing purposes. "The revenue raising ability of that tax, of course, depends crucially on the value of property within a government's borders" (Reynolds,

2008, p. 180). Reynolds also noted that tax rates do not necessarily represent greater or less revenue:

Consumers who highly value education – at least those that have enough wealth to exercise a meaningful choice of residence – need not accept a high tax rate in order to live in a school district that spends heavily on education. That is because wealthy communities are able generate high revenues with a low tax rate. (p. 182)

Other factors that directly affect this type of taxation are the economy, the school district's relationship with the community, the school board, and tax caps. Therefore, as Illinois school districts become more dependent on local funds, the funding and education gap will continue to widen for per-pupil expenditures between districts. The wealth of a district directly impacts the programming as wealthier districts attract more teacher candidates, offer more programming choices, have better cared for facilities, and can offer smaller class sizes.

### Illinois General State Aid Grant

In order to combat the inequities between districts, governments have developed funding programs to support districts with less local wealth.

If equal opportunity were both a legal and societal goal, then scarce resources must be distributed in an equitable and adequate manner. Operationally, the only mechanism available to society to sustain equal educational opportunity is the financial aid distribution formula. (Wood, 2007, p. 19)

States have used various methods to distribute funds to districts in an effort to equalize wealth across districts.

Illinois uses the General State Aid (GSA) grant to provide greater equity to Illinois school districts. Wood (2007) describes this as a modified foundation level formula, meaning that Illinois attempts to provide a per-pupil foundation level of funding. This per-pupil

foundation level is achieved through a combination of local funding (property tax) and GSA grant dollars. The dollar amount of the foundation level is recommended by the Education Funding Advisory Board (EFAB). However, the state does not have to accept the recommendation. Table 1 shows the recommended level of funding and the Illinois adopted level. In 2013, Illinois adopted only 71% of the recommended per pupil foundation level.

Table 1

EFAB Recommendations and Foundation Level Adopted

Year	EFAB Recommendation <sup>a</sup>	Prior Year EFAB Indexed by Inflation <sup>a</sup>	Foundation Level <sup>b</sup>	Percent of Recommendation
2006	\$6,405		\$5,164	81
2007		\$6,064	5,334	81
2008		6,841	5,734	84
2009		7,128	5,959	84
2010		7,388	6,119	83
2011		7,992	6,119	77
2012	8,360		6,119	73
2013		8,561	6,119	71

<sup>a</sup>Data taken from EFAB Report, (ISBE, 2013a).

<sup>b</sup>Data taken from General State Aid Historical, (ISBE 2013b)

Compounding this issue is the funding appropriated to the GSA budget each year. For the last three years, the GSA grant has been underfunded in the Illinois State Board of Education (ISBE) budget. Illinois statute does not specify what should occur in the case of a budgetary shortfall, and many options have been explored. The options produce varying

effects on school districts due to the method utilized in claim calculations. When the grant is underfunded, Illinois has chosen to prorate school district's claims. Table 2 shows the budget shortfalls and claim proration amount.

Table 2

Illinois GSA Grant Budgetary Shortfalls and Proration of Claims

Year	Budgetary Shortfall	Claim Proration (Percent)
2006	\$ 8,265,094	100
2007	19,011,840	100
2008	32,710,876	100
2009	140	100
2010	(18,899,097)	100
2011	(260,405)	100
2012	(231,057,534)	95
2013	(518,176,370)	89
2014	(562,116,047)	89

Data taken from General State Aid Historical (ISBE, 2013a).

Dr. Chico, the ISBE Chairman stated in April, 2013:

We are basing our recommendation on what is required to fund education as required in state law. Current law requires that we allocate funding to schools based on a formula set in statute that requires a \$6,119 per pupil "Foundation Level," but the shortage of funds has meant we haven't met that obligation to our schools and more than two million students in three years. (ISBE, 2013, April 12)

### Synopsis

Illinois, by adopting a foundation rate that is less than the EFAB recommended rate in conjunction with the failure to appropriate the funding needed to support school districts GSA claims, fails to provide the minimum foundation level of education for students within the state. The result is a greater disparity between school districts per-pupil expenditures and therefore fails to provide equity to Illinois students.

### Theoretical Framework

The educational value that this research rests upon is the theory of equity and its application in school funding. Equity in school funding is a multidimensional issue that is both a public and private concern. King, Swanson, and Sweetland (2003) extended Easton's political model for educational purposes. They identified the three key groups that input into educational policy as society, professionals, and family. These three groups may have conflicting values inside the group as well as with the other groups. Society is the public voice, and its concerns may be political views, equity philosophies, and tax burden philosophies. Professionals include administrators and teachers who provide expertise but also have a vested employment interest and the same concerns as the public. Family is the voice of the child, those who have the most intimate knowledge of the student; it also has the same interests as the public but, in addition, may have specific educational needs or ideals. The public and private concerns must be coordinated, and therefore various theories must be taken into consideration regarding equity in funding (King, Swanson, & Sweetland, 2003, pp. 15-17).

The theoretical framework is organized as follows: education in a democratic society, equity philosophy, student equity measures, and equity of tax burden philosophy.

### Education and Democracy

Education has always been an integral part of the United States. George Washington referred to the importance of education in his first message to Congress:

Whenever an opportunity shall be furnished to you as public or as private men, I trust you will not fail to use your best endeavors to improve the education and manners of a people; to accelerate the progress of arts and sciences; to patronize works of genius; to confer rewards for inventions of utility; and to cherish institutions favorable to humanity (as cited in Fitzpatrick, 1939, p. 308).

Washington also described how education and the economy were linked in a speech given in 1789. He said, "As in civilized societies, the welfare of the state and happiness of the people are advanced or retarded in proportion as the morals and good education of the youth are attended to" (as cited in Fitzpatrick, 1939, p. 315). In his 1796 farewell address to the country, he recommended a public education with these words: "Promote then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened" (Washington, 1796).

Thomas Jefferson, in a October 28, 1813 letter to John Adams, championed an education system of free schools that would defeat an "artificial aristocracy" and in his words would generate a society where "worth and genius would thus have been sought out from every condition of life, and completely prepared by education for defeating the competition of wealth and birth for public trusts" (Jefferson, 1813). In this spirit, he proposed free public

education in the Bill for the General Diffusion of Knowledge in Virginia<sup>3</sup>, which in the preamble stated: “It is better that such should be sought for and educated at the common expense of all, than that the happiness of all should be confided to the weak or wicked” (Jefferson, 1778) .

When we connect Washington’s belief that the welfare of the state is in proportion to the people’s education and Jefferson’s belief in equal opportunity, equal opportunity in education is the method to ensure that all individuals, regardless of their background, have an opportunity to excel. Therefore, providing education will ensure the welfare of the state. It is this goal that has defined the educational funding equity debate for years. How do we fund education equitably and not based on inheritance and wealth? How do we neutralize wealth providing all students an equal opportunity to develop their talents?

### Society’s Equity Philosophy

The first question that must be addressed is the subjective nature of equity. Alexander stated that the community’s position on the equity continuum defined the finance policies and practices in education. In 1982, Alexander (as cited by King, Swanson, & Sweetland, 2003) defined a hierarchy of the philosophical dimensions of equity that provided the range of the continuum. Those dimensions were defined as commutative equity, equal distribution equity, restitution equity and outcome equity.

*Commutative equity* entitles a person to something on the basis of property rights alone and leaves the distribution of the marketplace unaltered. In school finance, this would allow for the greatest local discretion in using local tax bases.

---

<sup>3</sup> A Bill for the more general diffusion of Knowledge, *Report of the Committee of Revisors Appointed by the General Assembly of Virginia in MDCCLXXVI*. Richmond: 1784, p.53

*Distributive equity* is concerned with correcting inequitable conditions created by the design of government. This position would endorse the concept of fiscal neutrality as it is embodied in tax base equalization distribution formulas that place no restraints on local effort.

*Restitution equity* endorses the correction of inequitable conditions arising out of social and economic circumstances as well as those created by government action. Full state funding would be an acceptable means of financing public schools.

*Positivism* introduces the concept of educational need of children. This position justifies intervention designed to assist the least advantaged. Alexander defined several features that would need to be included in order to reach this level of equity, adequate financing, complete fiscal equalization for tax paying ability, uniform tax effort, and supplemental standards for corrective and remedial education programs. (p. 304)

### Student Equity Measures

Berne and Steifel (1999) identified three principles that can be used to determine if a particular distribution could be considered equitable from a student point of view and then connected these principles to measures.

*Horizontal equity.* As a student concept, it specifies that children who are equally situated should be treated equally. This has a strong qualitative component as it requires that students be placed into identified subgroupings. In general, the subgroups have been defined as general education, at-risk (or educationally disadvantaged), and special education students (Berne & Steifel, 1999). Horizontal equity is based on input and the student's success is dependent on the student. The financial perspective is that the spread of distribution should be minimized and therefore horizontal equity is usually applied across school districts.

*Vertical-equity theory.* Vertical equity is a children's concept that specifies the appropriate unequal treatment of differently situated children. Analogous to the challenge for

users of horizontal equity, users of vertical equity must identify “differently situated” students (Berne & Steifel, 1999). “Differently situated” is a broad term and can be determined at three levels: individual differences, district differences, and programming differences. Once the level is determined, value judgments are required to determine what will be considered a legitimate difference. The financial application of this perspective is determined by the level and value judgment perceived, but is primarily on output, meaning that all students receive funding to reach a defined level of education, and therefore a student with greater need would receive greater funding until the desired output level was met.

*Equal opportunity.* Berne and Stiefel (as cited by King, Swanson, & Sweetland, 2003) defined equal opportunity both in positive and negative terms. In positive terms, it provides an equal chance for students to succeed; in negative terms, circumstances outside a child’s control (such as poverty) should not impact his education. They basically define it as a condition in which there are no differences in treatment according to characteristics such as race or gender.

*Wealth neutrality.* “Wealth-related equal opportunity refers to the degree in which a child’s schooling (its funding and quality) depends on the property wealth of the district in which he or she resides in” (Berne & Stiefel, 1984, p. 3). The concept of wealth neutrality is that there should be no correlation between the two and is primarily a legal argument.

### Tax Burden Philosophy

King, Swanson, and Sweetland (2003) reviewed the concepts in equity from a tax burden perspective.

*Benefits received principle.* Taxpayers should contribute to the government in accordance with the benefits derived from services received. An example of this would be charging for municipal transportation.

*Ability to pay principle.* Taxpayers should contribute in accordance with their economic capacity to support public services. This requires an examination of an individual's ability to contribute.

*Horizontal equity.* The taxpayer's perspective would mean that each similarly situated group of individuals should contribute equally. As an example, taxpayers with equal annual incomes should pay equal amounts of income tax.

*Vertical equity.* The taxpayer's perspective would be that taxpayers with higher annual incomes would pay higher amounts of income taxes due to an increasing rate of tax as income rises. Fairness in the tax burden is represented by unequal payment; people with more ability to pay would be expected to pay more.

*Neutrality.* This principle states that there should be no undesirable side effects on the operation of the economic system. In general, a tax should not alter the business or the individual in response to the tax. (p. 70)

### Synopsis

If the welfare of a state is directly connected to the education of its populace, then the general diffusion of knowledge to the public becomes imperative in order for the state to succeed. However, the first consideration is the meaning of "knowledge" and requires the public to have a united qualitative view of what constitutes knowledge. Once that view is taken, the community can determine how that knowledge is provided to students. The perspective may be by equal opportunity, horizontally, vertically, or a combination of the views. The perspective adopted by the public will depend on the position of the community on the equity continuum. This might be anywhere along the continuum between commutative and positivism. That position might then be directly impacted by the tax burden that is attached to that perspective as well as how that tax burden is applied to a community. A tax

must be neutral and elastic in order not to impact the educational ideals adopted by the community.

### Conceptual Framework

The state of Illinois' approach to equal opportunity may be best described as a middle-of-the-road approach. It has tried to address the concerns of both students and taxpayers and has developed a multi-pronged approach. .

#### Foundation Funding Concept

In 1905, Elwood Cubberley wrote *School Funds and their Apportionment* in which he brought forward the concept of equal education funding. Cubberley advocated that all children should be equally valued and provided the same advantages. He stated:

The duty of the state is to secure for all as high a minimum of good instruction as possible, but not to reduce all to this minimum; to equalize the advantages to all as nearly as can be done with the resources at hand; to place a premium on those, local efforts which will enable communities to rise above the legal minimum as far as possible; and to encourage communities to extend their educational energies to new and desirable undertakings. (p. 17)

Cubberley advocated that states should utilize a flat grant process to provide students with a base level of funding.

In the early 1920s, Strayer and Haig advanced a different philosophy regarding this concept. Strayer and Haig advocated that flat funding grants were more likely to increase inequity rather than decrease it. Although each district received the same flat amount, wealthier districts would still be able to contribute more locally. Therefore, Strayer and Haig developed flexible formulas with the intention of equalizing funding. The philosophy would be that the state would grant funds in proportion to local wealth.

As local wealth increased, the grant funds would decrease or alternatively as local wealth decreased, state funds would increase. Although communities could contribute additional funding above the determined level, it was argued that all districts would at least have the same foundation in funding to provide students an education. Therefore, the Strayer and Haig formula grants were referred to as foundational programs. Illinois adopted a foundation formula in 1927 with the intention of equalizing funding across school districts (Hoffman, 1981). The Illinois formula has been modified over the years, however the premise of a foundation level still exists.

### Illinois Foundation Level

The Education Funding Advisory Board (EFAB) is responsible for recommending the foundation level of funding that is utilized in the GSA grant. In the 2013 Illinois Education Funding Recommendation Report issued by EFAB stated the charge of EFAB as:

The statutory charge of EFAB, as stated in 105 ILCS 5/18-8.05 (M) is to “make recommendations ... to the General Assembly for the foundation level ... and for the supplemental general State aid grant level ... for districts with high concentrations of children from poverty. The recommended foundation level shall be determined based on a methodology which incorporates the basic education expenditures of low-spending schools exhibiting high academic performance.” (p. 2)

In addition, for 2013, EFAB reported adopting the following four guiding principles:

1. Ensure the foundation level is sufficient to provide a comprehensive, high-quality education that prepares every student in Illinois to flourish in a global society.
2. Guarantee that the state share of public school funding provides a reliable, predictable, timely, and adequate funding stream.
3. Ensure that categorical and other targeted funds (including, but not limited to poverty grants, special education, transportation, English language learning,

and Early Childhood Education) are sustained year to year and are sufficient to meet the needs of students.

4. Eliminate the gap of real educational opportunities for all students in Illinois by reducing funding disparities to establish functional equity. (p. 8)

In order to reach a recommended level of funding, EFAB utilizes a methodology that was developed in 2001 by Augenblick and Myers. Augenblick and Myers defined the foundation program as follows:

The foundation approach is used in many states to assure that all school districts have access to a specified level of resources. In addition, foundation formulas ensure that the state-local shares of those resources is sensitive to the variation in wealth that typically exists across the school districts of a state. (p. 1)

EFAB describes the Augenblick and Myers' methodology as including a number of district variables including assessment, finances, and demographics. The current members of EFAB also noted in the 2013 report that due to the failure of Illinois to adopt the EFAB recommended amount for several years, it was of limited value to request an updated methodology.

### Illinois Categorical Funding

Illinois also provides grants which are distributed in support of specific programs. These grants are often narrowly targeted with very specific requirements and are, therefore, referred to as restricted or categorical grants. Fitts found that these grants generally originated by two methods, social program legislation and/or as incentives to implement services. He also noted that the funds budgeted for categorical grants varied based on services needed, health of the economy, and programs in favor. Some of the categorical grants are special

education, bilingual education, gifted education, textbooks, school lunch, and breakfast programs. (p.7)

### Taxpayer Equity

Educational funding in Illinois is supported by property tax. In the guide entitled *The Illinois Property Tax System*, produced by the Illinois Department of Revenue, there is a distinction to be made regarding real property and personal property and what levels of taxation can take place:

Property can be divided into two classes — real and personal.

**Real property** is land and any permanent improvements. Examples include buildings, fences, landscaping, driveways, sewers, or drains.

**Personal property** is all property that is not real property. Personal property includes automobiles, livestock, money, and furniture

***Only real property is taxed in Illinois.*** The 1970 Illinois Constitution directed the legislature to abolish personal property taxes and replace the revenue lost by local government taxing districts, including school districts. Corporations, partnerships, limited partnerships, joint ventures, and similar entities continued to pay taxes on personal property until 1979. These business entities now pay a replacement tax on income and invested capital to the state. These monies are then distributed to the local government taxing districts in proportion to the amount received from the personal property tax for the 1977 tax year (1976 for Cook County). (p.5)

Property tax is a “visible” tax, as the homeowner can easily link the benefits derived with the taxes levied. This visibility directly impacts the neutrality of the tax however, as value received from the service is subjective. A family with four children may believe that education is vital and provides great value, whereas a retired homeowner may see the service as being of little value. The public’s perception of neutrality will be tempered by the perception of both the quality and the need for the service provided.

The largest problem with the utilization of property tax to fund schools, however, is that taxing bodies are not divided up into uniform areas such as household or property values. Therefore, in order to raise the same amount of revenue, areas that are property wealthy may have a lower tax rate than areas that are property poor. This becomes self-perpetuating as areas with low taxation will attract more businesses and homeowners, leading to more property wealth. Another problem impacting property taxation is that some counties have adopted the Property Tax Extension Limitation Law (PTELL), which limits the amount of revenue that can be collected, where other counties have not. These inconsistencies provide little, if any, equity to taxpayers.

#### Statement of the Problem

In 2012, President Barak Obama stated: “If we want America to lead in the 21<sup>st</sup> century, nothing is more important than giving everyone the best education possible – from the day they start preschool to the day they start their career.” Students are now being required to compete in a larger economic arena due to massive strides in technology. However, at the same time, the disparity in funding between Illinois school districts has increased.

As Fitts (2008) identified, the revenue sources for Illinois school districts are a combination of federal, local, and state sources. The primary burden of funding is local sources, which has increased in recent years. ILEARN (2013) shows that Illinois dependency on local funding increased by 3.76% between 2000 and 2012. State funding decreased by 4.80% in the same time period. Federal sources increased by 1.04%, which helped to offset

the decrease in Illinois funding. However, federal funds are in the form of grants that are narrowly targeted to specific populations, such as special education or poverty. These grants help to achieve some vertical equity but are not assistive in providing horizontal equity or equalizing funding as few of these grants can be accessed by the entire student population.

The primary Illinois source of local funding comes in the form of property tax. As Illinois school districts are not formed with regard to the number of households or the square mileage or property value, disparities exist between districts. Therefore, as the dependency on local taxation increases, the result is increased inequity between districts. Tax yields are inconsistent between districts due to the variation in property values and tax rates. Districts with low property values must tax at a higher rate and often produce less funding than districts with high property values and a low tax rate. These issues translate into inequity in educational opportunity for students and equally is an inequitable tax burden to the public.

The state of Illinois distributes funds via grants including categorical and the GSA. Restricted or categorical grant funding is directed at certain populations such as at-risk students, special education, and English language learners. The GSA grant goal is to provide students with a foundation level of funding. However, the state of Illinois has not adopted the EFAB recommended level of foundation funding. In addition, the state has failed to appropriate enough funding to fully fund the adopted level and has prorated school district claims (ISBE, 2013). Governor Quinn has produced a 2015 budget (based on the current Illinois revenue sources and referred to as the “not recommended” budget) that is \$451.2 million, or 10.2%, below the FY14 appropriation and \$609.3 million, or 13.2%, below the FY15 Recommended budget (ISBE, 2014). If enacted, students will not receive the

minimum foundation level of funding. The proration of grants will also cause increased disparity, in that the Illinois grants are not necessarily prorated at the same level. Special education grants may receive full funding, whereas GSA may only receive partial funding.

As the state is no longer appropriating enough funding to meet the claims of the GSA grant, the minimum foundation level funding is not being provided to students in Illinois. Therefore, other methods to ensure horizontal equity or provide for the minimum foundation level of funding must be evaluated and considered. This should be explored with more global solutions in mind, since students are expected to compete globally.

### Significance/Justification of the Study

The problem of inequity in schools is vital, as education is considered vital to the survival of democracy and to the well being of our economy. A quantitative study of potential resolutions to financing the foundation level of students in Illinois is useful to scholars, legislators, and other stakeholders attempting to find a resolution to educational equity to the state of Illinois.

Analysis of the updated data assists districts and legislators as they consider district consolidation in respect to funding. In addition, the results of the three scenarios assist legislators as they consider options and debate issues in school finance as related to equity.

This study also provides a brief history of the financing of education in Illinois along with legal challenges to the financing system. This helps stakeholders understand what historical issues have contributed to the current financing problems and what the results of legal challenges have been.

### Purpose of the Investigation

This quantitative study examines three scenarios to provide the state of Illinois with the GSA per-pupil foundation level of funding. The two factors that are specifically considered are EAV and tax rates. The study examines and provides data regarding the impact of each of the scenarios on both students and the taxpayers. These potential solutions focus on the consolidation of EAVs and a uniform tax rate.

The study specifically examines data and information regarding the 2011-2012 school year. This data is downloaded directly from the ILEARN system on the Illinois State Board of Education website.

The three scenarios are described below:

1. Consolidate the EAV within a county and utilize a uniform countywide tax rate to provide the foundation level of funding for school districts.
2. Move the state from a minimum foundation level formula to a state support program utilizing a uniform tax rate for the state of Illinois. This would move the state of Illinois to a model similar to Utah in which the state foundation level would be raised by a state tax and redistributed to school districts eliminating the need for a GSA grant.
3. Apply an operational tax rate to school districts as currently organized to provide the minimum foundation level of support.

### Research Questions and Hypotheses

1. What would a quantitative study of equity in Illinois reveal for the 2011-2012 school year?
2. If district revenues were combined into countywide level schools,
  - a. What would be the EAV per-pupil range be at a county level?
  - b. What percentage of students would be impacted positively or negatively by the consolidation of EAV?
  - c. Utilizing the countywide consolidated EAV, what would the county uniform tax rate need to be to meet the adopted foundation level for the year?
3. How would countywide revenues impact equity in the state of Illinois?
4. If EAV was consolidated at the state level, what would the state uniform tax rate need to be to provide the foundation level of funding for school districts in the state?
  - a. Which districts and counties would have to return funds to the state for redistribution if EAV was consolidated at the state level? Alternately, what counties would receive additional funding?
  - b. What percentage of students would be impacted positively or negatively by a state consolidation?
5. What would be the operational tax rate for school districts as currently organized in order to generate the minimum foundation level of support?

### Delimitations of the Study

While a broad study is hoped to be accomplished, limitations of the study is that if data is unavailable from specific counties or districts, those districts are not included within the study.

The complete scope of this limitation will not be known until the data collection phase of the study has taken place. The most recent year of data available at this time is 2011-2012.

This study focuses only on districts that directly serve students.

The study does not review all aspects of school financing that may impact school districts that are combined into countywide districts, such as the impact to debt service.

### Limitations

School districts do cross county borders. It would be beyond the scope of this study to separate students into the county that they reside in. For the purpose of this study, districts are consolidated into the county that the district currently reports data to.

Although this study focuses primarily on equity, a further limitation of this study is that it does not consider whether the foundation level set by the state of Illinois is adequate for providing an education to Illinois students. Although the literature review contains an overview of the GSA process, it does not consider inequities in that process.

It is also beyond the scope of this dissertation to determine if the state of Illinois category of students chosen for the GSA grant is equitable. The state of Illinois' GSA eligibility category is students within the state. As an example, that category does not allow for differentiation between grade levels. ISBE showed in 2012 that the average elementary

operating expenditures was \$11,457 and for high school \$15,138, or 32% higher than elementary schools (ISBE, 2014). High school students, in general, require a level higher funding due to a broader curriculum and a longer teacher day; however, the same foundation level is provided to all students. As grade level of student is not available on the report card data, it was beyond the scope of this dissertation to include this dimension. As a reference point to the reader, Figure 1 shows the distribution of students by grade level using the 2012 Fall Housing Report.

Figure 1. 2012 Fall Housing Report Student Grade Level.

### Assumptions

The study does not attempt to verify the accuracy of the data reported with the reports on the ISBE website. Data within those reports is assumed to be correct. There are a variety of sources available and the study attempts to triangulate the data to provide a more accurate and complete study. However, it is assumed that due to the triangulation of data, some inconsistencies in data will become apparent. Whenever possible, the study attempts to resolve those inconsistencies.

It is assumed that the state of Illinois wishes to reduce the variation in expenditures per pupil with the passage of time. It is assumed that the state will permit some variation from absolute equity, but wishes to reduce the current disparity in variation.

## Definition of Terms

### Financial Definitions

*Appropriation level.* The total state dollars available for general aid funding as set up by the General Assembly.

*Assessment.* The process of valuing real property by the local assessor.

*Assessed value.* The amount entered on the assessment rolls as a basis for division of the tax burden. This amount is subject to the state equalization factor and the deduction of the homestead exemptions.

*Available local resources.* The product of the district's tax base times a tax rate that is constant for each type of district plus its corporate personal property replacement tax revenues.

*Average daily attendance (ADA).* The aggregate number of pupil days in attendance divided by the number of days in the regular school session. A pupil who attends school for five or more clock hours while school is in session constitutes one pupil day of attendance. The best three months' average daily attendance of the prior year is used in calculating general state aid for the current year. ADA figures are sometimes adjusted due to audits of school records. Therefore, the ADA and the per-pupil fields that are dependent on the ADA may change as a result of these adjustments.

*Corporate personal property replacement tax revenue (CPRTT).* A tax collected from Illinois corporations and distributed to government units by the Illinois Department of Revenue and is treated as payment in lieu of taxes.

*Distribution.* Payments of tax receipts by the county treasurer to schools and other units of local government.

*Elementary school district.* A school district that is organized to serve students from kindergarten through eighth grade.

*Equalization.* Adjustments to local assessed valuations to bring about an assessment equal to one-third of fair market value.

*Equalized Assessed Value (EAV).* The equalized assessed value, or EAV, is the result of applying the state equalization factor to the assessed value of a parcel of property. Tax bills are calculated by multiplying the EAV (after any deductions for homesteads) by the tax rate.

*Formula type.* Districts receive their general state aid funding under one of three distribution formulas: special-equalization-resource-equalizer districts, alternate-method districts, and flat-grant districts.

*Foundation level.* The amount per pupil designated by the legislature as the minimum amount of resources to be available from combined property and corporate replacement taxes and general state aid.

*High school district.* A school district that is organized to serve students between ninth and twelfth grades.

*Levy.* To impose a tax fee or a fine or the total of taxes or special assessments imposed by a governmental unit.

*Multiplier.* The factor applied to a township or county's total assessed valuation to equalize it to one-third of fair market value, the rate specified in law.

*Operating tax rate.* All school district property taxes extended for all purposes, except community college educational purposes, for the payment of tuition under Section 6-1 of the Public College Act (110 ILCS 805/6-1), bond and interest, summer school, rent, capital improvements, and vocational education building purposes. The operating tax rate shown for specific fiscal years represents the tax rate for the period two years prior to the fiscal year shows. For example, in fiscal year 2012, the operating tax rate shown is for 2010.

*Poverty count.* The number of pupils from low-income families based on Illinois Department of Human Services (DHS) data on low-income families within the school district.

*Property tax.* In Illinois, only real property is taxed. Real property is land and any permanent improvements. Examples include buildings, fences, landscaping, driveways, sewers, or drains.

*Property Tax Extension Limitation Law (PTELL).* A tax cap law to control the growth of property taxes by limiting the annual increase in total property tax receipts and by limiting or curtailing the issuance of certain bonds that prior to the enactment could be issued without referendum.

*Tax base.* The total EAV of a school district.

*Tax cap.* A term that refers to the PTELL.

*Tax rate.* The amount of property taxes extended expressed as a percentage of EAV.

*Tax year.* The calendar year in which a property is assessed and the levy is made.

Taxes are billed, collected, and distributed in the following calendar year.

*Total tax rate.* A school district's total tax rate consists of all funds levied which may include education, operations and maintenance, transportation, working cash, Illinois Municipal Retirement Fund, liability insurance, special education, social security, bonds and interest, and fire safety bonds.

*Unit school district.* A unified school district, which includes both primary school (kindergarten through middle school or junior high) and high school (grades nine through twelve). In Illinois, these districts are often called community unit school districts.

### Statistical Definitions

*Coefficient of variations (CV).* The CV is the standard deviation of a distribution divided by the mean, expressed as a percentage. The CV measures variability in an object distribution around the mean observation. As the CV decreases, equity increases. Values of 0.05 or less are preferred.

*Federal range ratio.* The federal range ratio is the difference between the per-pupil object at the 95<sup>th</sup> and the 5<sup>th</sup> percentile, divided by the value of the 5<sup>th</sup> percentile. As the federal range ratio decreases, equity increases. Values of 0.25 are preferred.

*Gini coefficient.* The Gini index indicates how far the distribution of the object is from providing each proportion of pupils with equal proportion of the object. This measure theoretically ranges from 0 to 1. As the Gini decreases, equity increases.

*McLoone index.* The McLoone index measures equity for the lower half of the object distribution only. It is expressed as a ratio of the actual object of all pupils below the median relative to the total object those pupils would receive if they were at the median per-pupil

object level in the state. The McLoone index ranges from 0 to 1. As the McLoone index increases, equity for the lower half of the distribution increases. Values of 0.97 or higher are preferred.

*Range.* The difference between the highest and lowest per-pupil objects in the distribution.

*Restricted range.* The restricted range is the difference between the object per pupil to selected percentiles, for example, the difference in object per pupil at the 95<sup>th</sup> percentile and the 5<sup>th</sup> percentile. As the restricted range decreases, equity increases. Values of 1.25 or less are preferred.

### Summary

When considering how Illinois might change the revenue structure for education, the changing nature of the economy should be considered. The new focus on a global community and global economy indicates that Illinois should look at the revenue from a global perspective rather than a local perspective.

In addition, the failure to allocate enough funding to GSA to create a minimum foundation level of equity will continue to impair the ability of Illinois to educate its students to an acceptably equitable level. This will continue to exacerbate the self-perpetuating issues between the state's economy and educating the workforce.

If Illinois has a goal of consolidating school districts to reduce expenditures that would also require revenues be consolidated at a higher level. This, in conjunction with the uniformity of taxation article, would indicate that uniform tax rate should be considered.

## CHAPTER 2

### LITERATURE REVIEW

#### Illinois School District Organizational Structure

The development of Illinois school districts began in 1846 when school townships were made from congressional townships. The congressional townships were based on the survey of the Northwest Territory.<sup>4</sup> It should be noted that congressional townships can and do cross county lines and so do school districts. The board of trustees of the school townships was charged with developing convenient school districts. Due to the borders of the state and the survey, fractional townships were necessarily created, which could either stand-alone or be incorporated into other districts, depending on the number of students. These original districts could be altered as well by either the failure to have an open school for two years or by petition. Morrison (1924) notes that, “At the time, Illinois was fairly homogenous in both the population and economies so each school most likely centered on the maximum tax area and reasonable accessibility to the schoolhouse” (p. 15). In 1922, there were 102 counties, 1,656 townships and 11,879 school districts in Illinois (Swift, 1925, p. 1).

Morrison (1924) defined an additional problem with the development, as it allowed for multiple types of districts to be developed in small areas. At the time of development, 16 counties had not developed civil townships. As villages and urban areas developed, new types of districts were formed. He identified the district types as shown in Table 3.

---

<sup>4</sup> Northwest Ordinance 1 Stat. 50 (1787)

Table 3

## 1924 Structure of School District Organizations (Morrison, 1924)

Type	Financing of Public Schools in the state of Illinois Definition
Common	Elementary districts
Consolidated	A union of two or more common schools to eliminate the one-room schoolhouse. It can unite purpose if it is developed within an urban trading center. It has a broader political and tax base. This must be voted on by a majority (p. 17). They may be elementary, high, or a combination of both schools.
Community Consolidated	This is formed when the schooling of children is focused on a central urban trading area to which a given area is tributary. It is often financially motivated to broaden the tax base to include the industry that is creating the pupil base. This is created by a majority vote in the proposed territory (p. 19).
Special Charter Schools	These are formed primarily for administrative control. They are generally elementary, but there is one high school at this time.
Community High Schools	This is formed when the schooling of children is focused on a central urban trading area to which a given area is tributary. It is often financially motivated to broaden the tax base to include the industry that is creating the pupil base. This creates a dual taxing to citizens (p. 21).
Township High Schools	This is a school organized to provide a high school township. It does create a dual taxing to citizens (p. 20).

Morrison found that the multiple organizational types allowed some communities to be taxed by a separate elementary and high school district, while other communities had combined the elementary and high school into one unit. He also noted that districts annexed properties often based on economic rather than educational reasons. Therefore, a community might annex an area because it contained a prosperous business, but the majority of the pupils generated by that business might not live within the district. This also meant that districts

were not necessarily contiguous, and students sometimes had to pass a school to get to the school that they were required to attend.

Today, little has changed in the structure of districts. Table 4 shows the 2013 Illinois school districts by organizational type. Districts have now been structured to be contiguous; however, a recent Public Act 098-0125<sup>5</sup>, which was effective as of August 2, 2013, provides that:

If pursuant to a petition filed under Section 7-1 or 7-2 of this Code, all of the territory of a district is to be annexed to another district, then the annexing district and the annexed district need not be contiguous if the following requirements are met and documented within 2 calendar years prior to the petition filing date:

- (1) The distance between each district administrative office is documented as no more than 30 miles;
- (2) Every district contiguous to the district wishing to be annexed determines that it is not interested in participating in a petition filed under Section 7-1 or 7-2 of this Code, through a vote of its school board and documents that non-interest in a letter to the regional board of school trustees containing approved minutes that record the school board vote, and
- (3) Documentation of meeting these requirements are presented as evidence at the hearing required under Section 7-6 of this code.

In an April, 2013 newspaper article, State Superintendent Christopher Koch stated that even though legislation had passed to offer more consolidation options to Illinois school districts, that it would not be taken advantage of for the following reasons:

- Communities choosing not to give up local schools
- Personnel being the largest cost. Teacher salaries, contracts, and positions not being equal (Leone-Cross, 2013).

Community Unit	348	26	Elementary/High School
Hybrid	1	27	Elementary High School
Total	864		

Note: Type Code is utilized by ISBE to identify types of district (ISBE, n.d.).

## Illinois Educational Funding 1816-2012

### 1816 – 1850

Education was an important consideration in Illinois. “In his 1816 campaign for congressional delegate, Nathaniel Pope expressed his desire to promote territorial prosperity and emigration to Illinois, by facilitating improvements such as building new roads, and increasing funds for education” (Edstrom, 1995, p. 244). He followed this with his enabling act for the creation of the state of Illinois<sup>6</sup> (Bone, 1957, p. 120). Regarding education, Nathaniel Pope stated:

The diffusion of knowledge among the poor classes of society is a great desideratum with me and the Bill before the Senate derives most of its value in my eyes from the introduction of a feature from which (in my humble opinion) such permanent benefits to society will necessarily flow. And the apprehension that postponement might effect a different application of that fund has infused into me a zeal bordering on importunity for the passage of the Bill at the present session. (as cited by Edstrom, 1995, p. 258)

Illinois became a state on December 3, 1818, and the act stated:

First. That section number sixteen, in every township, and, when such section has been sold or otherwise dispose of, other lands equivalent thereto, and as contiguous as may be, shall be granted to the state, for the use of inhabitants of such township, for the use of schools.<sup>7</sup>

The act also stated:

Third. That five per cent of the net proceeds of the land lying within such state, and which shall be sold by Congress, from and after the first day of January, one thousand eight hundred and nineteen, after deducting all expenses incident to the same, shall be reserved for the purposes following, viz: two-fifths to be disbursed, under the direction of Congress in making roads leading to the state; the residue to be

---

<sup>6</sup> H.R. 53, 15<sup>th</sup> Cong., § 6

<sup>7</sup> Chap XLVII, 15<sup>th</sup> Con., § 6

appropriated by legislature of the state, for the encouragement of learning, of which one-sixth part shall be exclusively bestowed on a college or university.<sup>8</sup>

However, the constitution<sup>9</sup> written shortly after that time had no mention of education within it.

Seven years after becoming a state, the first Illinois school law was adopted in 1825.

The first public school law in Illinois was the Free School Act of 1825.<sup>10</sup> This was a very advanced law for its time. The preface of the Act stated:

To enjoy our rights and liberties we must understand them; their security and protection ought to be the first object of a free people: and it is a well-established fact that no nation has ever continued long in the enjoyment of civil and political freedom, which was not both virtuous and enlightened; and believing that the advancement of literature has always been, and ever will be the means of developing the rights of man, that the mind of every citizen of a republic is the common property of society, and constitutes the basis of its strength and happiness; it is therefore considered the peculiar duty of a free government, like ours, to extend the improvement and cultivation of the intellectual energies of the whole. (Blair, 1925, p. 13)

The act provided that, “There shall be established a common school or schools in each of the counties of the state, which shall be open to every class of white citizens between the ages of five and twenty-one years” (as cited by Morrison, 1924, p. 13). The law also provided that:

The State shall appropriate two dollars out of every hundred received by the treasury for the encouragement and support of schools. In addition, five sixths of interest arising from the school fund shall be divided yearly among the counties. Money shall be appropriated on the basis of the number of white inhabitants of each county under 21 years of age. The commissioners of school funds shall be the Auditor and Secretary of State under the direction of the Governor. (as cited by Pullman, 1967)

Morrison (1924) notes that the population of the state at the time was approximately 100,000 and Chicago was not seen as an outstanding unit (p. 13).

---

<sup>8</sup> Id.

<sup>9</sup> Ill. CONST. OF 1818 (1818)

<sup>10</sup> S. 1, 1825 (Ill. 1825)

Unfortunately, the controversy of school funding in Illinois began early. Haig (1914) noted that, “The settlers seem to think there was something ignoble about paying taxes” (p. 28). The opposition to the school tax was based on some childless families who did not want to pay taxes to support the schools and some families who still preferred subscription schools. In addition, farmers had high concerns that their children would be educated and unfit for farm work (Pullman, 1967, p. 29).

The amendment to the Free School Act adopted on February 17, 1827 removed the free school version entirely, and it would be 1855 before another free school law would be adopted. The 1827 revision stated: “No person shall be taxed for the support of any free school in this state unless by his own free will and consent first had and obtained in writing”<sup>11</sup> (Revised Code of Laws of Illinois 1826-1827, p. 365). This retarded the establishment of a school funding mechanism for years and Pullman (1967) describes it as a “deathblow” (p. 30).

The legislators of the time were fully aware of the tax sentiments. Rather than levy taxes, the legislators would sell school lands and borrow those funds to pay current expenditures. This was, in effect, a double whammy, as the sold land could not be taxed for five years. The technical loan from the school fund to the general fund had only the interest being repaid to the school fund. “The heritage of the state in school land was frittered away by legislators reluctant to risk their popularity by the levy of taxes on a tax hating people” (Haig, 1914, p. 29). The debt to the school fund was \$719,784.61 in 1838 and had risen to \$808,084 by 1842 (Haig, 1914, p. 77).

---

<sup>11</sup> Laws of Illinois. 1826-1827, p.365

Although the General Assembly passed a school bill in 1841 with 109 sections, there was no reference to taxation. This was followed in 1845 by a bill that provided for a state official to study and report on education (Bone, 1957).

### 1855-1919

In 1855, the Illinois General Assembly passed An Act to Establish and Maintain a System of Free Schools.<sup>12</sup> This act charged local boards of education with the creation and support of public schools. For the first time, communities were required to levy property taxes for the maintenance of tuition free public schools (Carr, 1991). The 1855 law limited the taxation to the sum necessary to support six months of expenditures. This was revised in 1857 to no limit when utilized for ordinary expenses. However, for items such as building and grounds over the normal expenses, the tax was subject to a majority vote (Haig, 1914).

Although an article was proposed in 1862, Illinois did not include an education article in its state constitution<sup>13</sup> until 1870 (Sparkman, 1994). In 1870, Section I of Article VIII<sup>14</sup> stated: “The General Assembly shall provide a thorough and efficient system of free schools, whereby all the children of the state may receive a good common school education” (Cornelius, 1969, p. 69). In 1872, the taxing power of school boards was limited to two percent of the assessed valuation of property for ordinary expenses and three percent for building purposes (Haig, 1914, p. 187). This constitution<sup>15</sup> set the stage for appropriations in lieu of school taxes.

---

<sup>12</sup> An Act to Establish and Maintain a System of Free Schools. 1855, p.1-50

<sup>13</sup> Ill. CONST. of 1870 (1870)

<sup>14</sup> Ill. CONST. art. VIII, § 1 (1870)

<sup>15</sup> Id.

In 1873, Illinois adopted a policy of appropriations in lieu of the state two-mil school tax allowed by law. The act stated:

Be it enacted by the People of the State of Illinois, represented in the General Assembly, that there shall be raised, by levying a tax, by valuation, upon the taxable property in this State, the following sums for the purposes hereinafter set forth –

For general state purposes, to be designated “Revenue Fund,” two millions five hundred thousand dollars upon the assessed value of property for the year 1873, and one million five hundred thousand dollars annually thereafter; for state school purposes, to be designated “State School Fund” (in lieu of the two mill tax therefore) one million dollars annually.

2. The governor and auditor shall, annually, compute the separate rates per cent, required to produce not less than the above amounts, anything in any other act providing a different manner of ascertaining the amount of revenue required to be levied for state purposes, to the contrary notwithstanding; and when so ascertained, the auditor shall certify to the county clerks the proper separate rates per cent, therefore, and also definite rates for other purposes as now or may hereafter be provided by law to be levied and collected as state taxes.<sup>16</sup>

In essence, Illinois exchanged an ever-increasing school fund (the two-mil school tax revenue would have increased with property values) for one that limited the levy to the appropriated amount. In 1873, the appropriation was for \$1,000,000 per year and stayed at that level through 1909 (Swift, 1925, p. 11).

In 1898, the issue of appropriate assessment was addressed with The Revenue Law of 1898, which required a special oath to be taken by tax assessors. It stated that

To the best of my ability, that I without fear or favor appraise the property in said county at a fair cash value, said value to be ascertained by what the property would bring at a voluntary sale in the course of business and trade and that I will assess said property when so appraised at one-fifth of the said cash value. (as cited by Haig, 1914, p.137)

<sup>16</sup> An Act to Establish and Maintain a System of Free Schools, Laws of Illinois (Amended), 1873, p. 149

1920-1939

In the early 1920s, a strong focus on education was taken at the national level. This focus brought forth many studies regarding how education was financed within states. Swift (1925) defined the distinctive features of Illinois financing system in the 1920s as:

1. The lack of any productive permanent state common school fund;
2. Township ownership and management of the permanent common school funds derived from the proceeds of the sales of sixteenth section school lands;
3. The substitution of flat annual appropriations and provision for a state general property tax of rate sufficient to produce the same, in lieu of the state school tax of 2 mills provided by law;
4. The supremacy of the school district and the consequent decentralized administration of schools and school finance; and
5. A double-deck system of school taxation whereby two separate school taxes are levied upon all property within the state, the first for the purposes of elementary education and the second for the purposes of high school education (p. 2).

He also noted that Illinois ranked fourth in the Union with its ability to fund education and one of the smallest per-capita debt rate among the states, but was outranked by 22 states in expenditures per student. "Illinois has little to be proud of either from the standpoint of the effort she was making in the light of her ability to maintain schools or from the standpoint of results" (Swift, 1925, p. 3). Swift also notes that the common school fund exists only as a debt, which the states pays six percent interest on.

At this time, state funds were distributed to the counties based on the number of individuals under 20 years of age residing in each of the counties on the first Monday of January. This system had been in place since 1835 (Hoffman, 1981, p. 3). Swift's (1925) comment regarding the state aid formula was, "Of all the bases employed in the United States today, in apportioning school moneys, none is more ineffective, unfair, unscientific, and disastrous than the Illinois basis of minor population" (p. 76).

In 1921, the Illinois State Teachers Association produced a pamphlet entitled *The Crisis in Public Education in Illinois*, which highlighted the inequity in funding between districts. It discussed two side-by-side districts, District 111 Stickney Township and District 103 Lyons.

The assessed valuation of District 111 is \$1,149,912 and there are only 51 children enrolled in schools. The assessed valuation of Lyons is \$890,530 and there are 729 children in the schools. The tax rate in District 111 is 27 cents, and they have plenty of money. The tax rate in Lyons is \$2.67 and they have not enough to run their schools (Swift, 1925, p.74).

In 1936, Fulkerson reported that the appropriation level had risen from \$1,000,000 to \$13,000,000, and that education had been severely impacted by the depression. He noted that the inability of people to pay property tax and the reduced assessed evaluation of property resulted in less receipts, leaving schools unable to operate and forcing major reductions in services. By 1933, the state had approved a sales tax to assist in financing the state, and this allowed schools to receive their full amount of state aid claims. However, despite the Illinois Supreme Court ruling that both elementary and high schools were common schools, high schools received no aid. “As a matter of fact, only the first eight grades of the public school system of Illinois enjoy the right to receive funds from the state treasury to assist in the equalization of educational opportunities for boys and girls” (Fulkerson, 1936, p. 45). He blamed the original failure to provide state aid to high schools on the number of children enrolling in high school, noting that only 4% of elementary students went on to high school in 1900. This had increased to 25% by 1935. He also stated that to include state aid to high schools was “political dynamite” in that it would cause increased taxes. He quoted a study by L. R. Grimm that showed that the average amount contributed to education by states was

\$26.12 per pupil, and at the time, Illinois was contributing only \$11.29. In 1943, high schools first began receiving state aid (Bureau Of Research and Service, College of Education, University of Illinois, 1949, p. 38).

#### 1940-1949

In the 1945, Illinois passed the County School Survey Act<sup>17</sup> to allow counties to complete a grassroots study and make recommendations regarding the consolidation of districts. Of the 102 counties, 101 counties formed committees under this act. The committees had little success for two reasons: the first was that only reorganizations were recommended that the committees felt would be immediately accepted, and two, the legal process was cumbersome and difficult to accomplish (Sumpton, 1948). In 1947, a new law was passed to reduce the legal process, and it met with outstanding success in 133 community unit districts being established (Massanari, 1949, p. 393).

In 1949, the University of Illinois Bureau of Research and Service found that 88% of funding for school districts was provide by local funding. They recommended a hypothetical plan for optimizing districts within Illinois. The countywide plan included nine salient points:

1. Assign each county at least one high school.
2. Place one elementary attendance center at each high school center.
3. Allow additional schools only as centers could support a minimum of 700 high school pupils or 300 elementary pupils without taking pupils from other centers.
4. Allow the maximum number of centers within these limitations, but place no maximum limit on the size of enrollment.
5. Cross no county lines.
6. Locate schools in the largest, most centrally situated cities and villages to serve contiguous rural territory.
7. Place the center where the least amount of transportation is required when a choice is to be made between population centers

---

<sup>17</sup> H.R. 406, 64<sup>th</sup> General Assembly, (Ill., 1945)

8. Assign each pupil to the school (within the county) nearest his home and transport him by the most direct route.
9. Avoid distances requiring any pupil to ride more than 45 minutes to school (Cornell, McLure, Miller, & Wochner , 1949).

In 1949 in the book, *Forty-eight State School Systems*, Chase and Morphet reported the following data regarding Illinois:

- Illinois ranked 8<sup>th</sup> in the nation regarding per capita income (p.16).
- 4<sup>th</sup> in the nation at \$13,903 for average income per pupil in average daily attendance in the public schools (p. 17).
- Illinois ranked 48<sup>th</sup> in total personal income allocated toward the public schools with only \$14.00 out of every \$1,000 being allocated to education (p. 18).
- “The state with the largest number of one-teacher schools is not, as might be expected, one of the more sparsely settled states but the relatively densely populated state of Illinois, which reports 6,778 one-teacher schools.” (p. 56)
- Only 17.6% of school support came from a state level (p. 114); 84.3% came from local funding (p. 116).
- Illinois permanent school fund exists only as a perpetual debt, which interest is paid on (p. 118).

#### 1950-1969

In 1950, Burke and Morphet reported that forty states had established some type of foundation level or equalization plan, but that funds were too limited or bases set so low that 50% of these programs were ineffective (p. 105).

The post-war period brought the Baby Boom and as those students reached school age, there was an increased willingness to support tax referendums for better schools. Educational expenditures increased at a rate that outgrew the gross national product during the 1960s, and this resulted in taxpayer resistance. A rising retirement population made the public more aware of the regressive nature of property tax. In response to this, the first income tax was proposed and passed in the state of Illinois. However, although the property tax issue was acknowledged as problematic, the income tax was equally disliked. Some politicians believe that Governor Ogilvie's support of the income tax led directly to his defeat in 1972. The passage of the income tax set the stage for changes in the early 1970's to funding (Hoffman, 1981).

In addition, the 1960s brought forward a number of court cases challenging both the national and Illinois finance systems regarding equity. These court cases were instrumental in driving school finance systems to more equitable distributions. A review of these court cases can be found in the legal review section.

#### 1970-1989

The late 1960s and early 1970s saw an education reform movement largely inspired by John Coons and Arthur Wise whose focus was on equity. After studying the financial situation in Illinois, in December 1972, the *Report of the Finance Task Force of the Governor's Commission on Schools* was issued. The task force recommended a three-tier formula approach to funding equalization incorporating:

Tier 1: Basic state grant to all children

Tier 2: Equalizing expenditures by the state for districts choosing equal tax efforts

Tier 3: Solely local funds

In addition, the task force recommended the weighting of students as follows:

½ day Kindergarten	0.55
Grades 1 through 3	1.10
Grades 4 through 8	1.00
Grades 9 through 12	1.25

Although all the recommendations in this report were not included, the report resulted in the enactment of the resource equalizer formula for state aid. However, the Strayer-Haig formula was retained for use by districts that would benefit from them. Hoffman (1981) noted that these changes would have been impossible without the enactment of income tax.

The basis of the resource equalizer was the premise that any two districts, which tax at the same rate, should receive the same amount of money per student (Walterhaussen, 1994).

Hickrod, Hubbard, Yang, and Rasamond (1976) gave an overview of the 1973 reform:

Essentially, after 1973, more state funds are provided to districts in Illinois with higher tax rates, lower assessed valuations, and heavier concentrations of Title I eligible pupils. Conversely, lesser amounts of state aid are available to districts without these characteristics. It is important to note that the Illinois system, like all “reward for effort” systems, contains both a “tax relief” aspect and a “tax stimulation” aspect. (p. 10)

In 1976, Hickrod et al. evaluated equity based on expenditure trends in 1976 found that the disparity in expenditures per pupil had decreased after the implementation of the 1973 reform. Walterhaussen (1994) noted that the state contribution was 48% in 1976, the highest it had been since 1858 (p. 130). However, by 1979, districts were once again showing a greater disparity in wealth and more dependency on local funding. The formula was altered

in 1980 to remove the reward for effort and to put all districts under one formula (Walterhaussen, 1994).

In 1983, Hickrod, Hubbard, and Chaudhari reviewed the formula again and found the formula increased disparity in wealth rather than decreased it. He defined the three issues that impacted the equity of the formula after 1976 to be:

- The suburbs and central cities that were the “big winners” in the 1973 reform could not hold on to the gains.
- The rural districts downstate felt they were left out and started a revolt.
- Wealthier unit school districts increased their assessed valuation at a faster pace than poor ones (p.20).

In the 1980s, the standards base reform movement began which opened the door to legal challenges centering on adequacy. A review of these Illinois challenges can be found in the legal review section of this chapter.

### 1990s

In 1991, five counties adopted the Property Tax Extension Limitation Law (PTELL), and by 2002, the law had been adopted by a total of thirty-three counties.<sup>18</sup> Since 2002, nine counties have rejected the measure. PTELL, or the tax cap, limits the growth of property taxes to 5% or the prior year’s CPI, whichever is lower<sup>19</sup>. There is an inverse relationship within the law that allows the total percentage to be accessed regardless of EAV; therefore, as EAV rises, tax rates fall; or as EAV decreases, tax rates rise. The natural extension of the law

---

<sup>18</sup> A list of counties and the year PTELL was adopted can be found in Essentials of Illinois School Finance, p.24

<sup>19</sup> CPI has been consistently lower than 5% since 1991.

is that as it limits the revenues that can be accessed, it limits the expenditures that school districts can make. Fitts (2008) reports that in the first years of implementation school districts were devastated as budgetary cuts were required as a result of reduced revenues.

After 1976, the state's share of funding began to decline, and in 1992, the state share was only 34%, lower than the share it had contributed in the early 1970s. Walterhaussen (1994) interviewed Hickrod regarding the decline in equity and Hickrod attributed the decline to the desire for no new taxes in the state and the lack of legislative leadership.

In 1993, five organizations, including Illinois Association of School Administrators, Illinois Association of School Boards, Illinois Education Association, Illinois Federation of Teachers, and ISBE participated in the development and adoption of finance principle. This represented the first time five educational organizations representing divergent opinions found common ground on school finance issues. The principles drove a new funding formula with three tiers. In 1990, Dahncke completed a study to determine if the three-tier formula would significantly impact equity in districts. Dahncke (1990) results showed that the three-tiered formula would not impact equity in any organizational structure.

In January, 1993, ISBE issued the *Report of the Illinois Task Force on School Finance*. The goal of the task force was to devise a plan to ensure adequate funding for all school districts. In order to provide adequate funding, the task force recommended that the cost figures associated with districts be developed and recalculated every five years to provide the foundation level of funding. It was also recommended that regional adjustments should be utilized in the calculation. The task force recommended that the variation in per pupil revenue be reduced and recommended the McLoone Index as an equity measurement. The

task force has no recommendations regarding property value divisions. The task force did recommend the three-tiered system for GSA (Illinois Task Force on School Finance, 1993).

The current GSA formula is still a three-tiered formula and was created in December 1997 by Public Act 90-548 and first implemented in fiscal year 1999. The GSA formula grant is basically a foundation approach with three separate calculations, depending on the amount of property wealth of the local school district (ISBE, 2014).

#### 2000 – 2012

The largest impact to school funding in the 2000s occurred when the housing bubble burst. In 2006, housing prices in the United States were at a high; by 2012 property values plummeted to an unprecedented low which caused a nationwide recession beginning in 2007. The federal government increased federal aid to school districts in the form of Title I and IDEA funding. State support to districts shrunk substantially even though the state also received federal funding. That funding was passed on to districts in the form of GSA. As property values decreased, many Illinois homeowners saw their taxes increase due to the inverse reaction of the Property Tax Extension Limitation Law. Table 5 shows the increases and decreases by revenue sources for Illinois school districts reported by ILEARN.

Table 5

## ILEARN Reported Illinois Revenue Percentages

Year	Local	State	Federal
2000	62.06	30.88	7.06
2001	62.06	30.88	7.06
2002	61.50	31.23	7.27
2003	62.06	29.95	7.99
2004	62.01	29.95	8.04
2005	63.32	28.58	8.10
2006	64.81	27.48	7.71
2007	64.92	27.82	7.25
2008	65.02	27.55	7.43
2009	65.30	22.76	11.94
2010	65.21	22.35	12.44
2011	63.27	26.64	10.09
2012	65.82	26.08	8.10

## The Current Constitution

The Education Clause

In the current version adopted in 1970, the education clause, Article X, Section 1 of the Illinois Constitution<sup>20</sup> states:

A fundamental goal of the People of the State is the educational development of all persons to the limits of their capacities.

The State shall provide an efficient system of high quality public educational institutions and services. Education in public schools through the secondary level shall be free. There may be such other free education as the General Assembly provides by law.

The State has the primary responsibility for financing the system of public education.<sup>21</sup>

<sup>20</sup> Ill. CONST. of 1970, art. X, § 1 (1970)

<sup>21</sup> Id.

All 50 state constitutions include an educational clause. These clauses vary from state to state and range from very general clauses to very specific clauses. A four-category system has been developed by legal scholars based on the strength of the language. Category I has the weakest or most general language and requires the least of the state. Each succeeding category increases the duty of the state with Category IV requiring the most. A Category IV clause places the strongest obligation on the state and the state's finance system. The Illinois language falls into category IV for educational clauses (the strongest) requiring the most of the state (Dayton & Dupre, 2004). Although Illinois has been challenged on several fronts, the Illinois funding formula has withstood the legal challenges to date.

### Real Property Taxation

Berne and Stiefel (1984) noted that taxpayers should be considered as an “equity target,” as they are the primary source for school finance. They also noted that taxpayers could be expanded to a household unit, which would enlarge the scope of equity.

Hoffman (1981) noted that although property tax is stable source of income, it is a regressive tax. Persons with lower incomes use a larger fraction of their income for their housing than those that earn more. He also noted that for those individuals on fixed incomes, such as retirees, the regressive nature of the tax becomes more visible. It is also one of the few taxes that a community votes on and is therefore easy to object to.

Article IX, Section 4 of the Illinois Constitution<sup>22</sup> states: “(a) Except as otherwise provided in this Section, taxes upon real property shall be levied uniformly by valuation ascertained as the General Assembly shall provide by law.” If one read this clause

---

<sup>22</sup> Ill. CONST. of 1970, art. IX, § 4 (1970)

particularly in conjunction with the strong language within the education clause, one might assume that the taxation for schools would be uniform across the state of Illinois. However, taxes are levied uniformly over districts, but not over counties or Illinois as a whole. As an example, for 2012, ILEARN reported operating tax rates for school districts between \$0.8998 and \$7.8035.

In arguing the application of the uniformity of taxation to schools, Reynolds (2008) suggested that the courts first would have to only determine in the education clause that the state is responsible for education. The argument that she advanced was:

The argument advanced here, however, is that the explicit constitutional clause requiring that the state provide education transforms those local taxes into state taxes for purposes of the uniformity clause. No transfer of the state's sovereign power to its political subdivisions can change the fact that the revenue generated by local taxes is collected in furtherance of the state's constitutional duty. Thus because the state education clause creates a state-level duty, the implementation of that duty by local school districts can no longer be defended as an exercise of local initiative. (p. 191)

If it was determined that the state is required to provide education, Illinois courts would then have to decide if the Illinois uniformity of taxation clause would apply to schools.

Reynolds (2008) noted that the disparity in school funding was rising and attributed it to the valuation of property along with the middle and upper class population leaving the cities for the suburbs. She noted that although the courts generally acknowledged the inequity, they left the financing structures in place. This caused the state to have “a continuing stream of state legislative catch-up attempts to aid those school districts whose property wealth cannot generate the same revenues as their affluent neighbors” (p. 180).

### General State Aid

In 1905, Ellwood Cubberley wrote the definitive work concerning educational opportunity and funding equity, advocating for a statewide system. He wrote, “All the children of the state are equally important and are entitled to have the same advantages” (p. 17). However, he also noted that this was almost never true and said, “One of the most important administrative problems of today is how properly to finance the school system of a state as the question of sufficient revenue lies back of almost every other problem” (p. 3).

Cubberley (1905) had a very clear concept of how equity could be reached in a state. His concept included:

1. A state system of schools instead of a series of local systems, without which there could be no equalization of both the burdens and the benefits of education.
2. Maintenance of good schools is for the common good and is not a matter of local interest but a state matter.
3. Aid should bear some relationship to the needs of the community and to the effort that the community makes to provide good schools and secure attendance of the same. It should not be provided indiscriminately.

He felt that the adoption of these principles would make a state “an active and positive force working for improvement of educational conditions” (p. 4).

Strayer and Thorndike (1922), building on Cubberley’s theory, noted that the separation of the school from general municipal concerns was a serious concern, as the use of property taxes placed schools in competition with other municipal needs. They indicated that this tax might “cripple” either the municipal needs or the schools over a period of time, and

that the use of a separate board to manage schools as well as to levy taxes was “open to serious criticism” (p. 352).

If the resources of our society were unlimited the problem of securing adequate support for education would be very simple. A need once recognized would be met by a grant of sufficient funds. As the situation actually is the ability of any community to satisfy the demand for increased support for schools must be judged in terms of the whole community fiscal problem (p. 352).

In the early 1920s, the inequity of educational opportunity was becoming increasingly apparent, and many studies were focused on how education was being financed throughout the states. Strayer and Thorndike (1922) summed up the discussion:

We are in the habit of claiming that in our country there is equal opportunity for every boy or girl by reason of our great systems of free public education. Often we overlook the fact that communities differ very greatly in the educational opportunity, which they offer. When we find a community in which the schools are markedly inferior, we are apt to characterize the place as unprogressive. The largest problem that we face in our state school systems is that of equalizing the educational opportunity offered to the children of the rural community, the village or town, and the city. Along with the shift of population from the country to the city there has come a corresponding concentration of wealth in these larger centers. Many communities are today poorer than they were fifty years ago, while on the other hand the per capita of other wealthy places may have increased ten or even fifty fold (p. 368).

Equally, they recognized that there was no common distribution formula used to distribute state funds to equalize the burdens of communities.

In 1924, Strayer and Haig developed a formula to provide a “foundation level of funding” to school districts. The philosophical basis was that all districts should have enough money for the education of each pupil, and therefore the state would provide a foundation level. This provided a per-pupil amount to the districts. In 1926, Mort introduced the concept of the weighted pupil. In that concept, he

weights a pupil when measuring the need in any other situation or in any type of education recognized on the minimum program by the amount representing the

relative cost of giving the pupil what would reasonably be accepted as an equivalent offering. (p. 92 )

The first Illinois Strayer-Haig formula was developed and adopted in 1927.

### Overview of State Aid Formulas

States have used various methods to distribute funds to districts in an effort to equalize wealth across districts. R. Craig Wood (2007) categorized these formulas into three groups:

- Flat grant, categorical, or entitlement programs
- Full state-support or funding programs
- Equalization aid programs

There are many facets to these types of grants, and states have taken several paths in an attempt to provide fair and equitable distributions as they try to address horizontal equity (same dollars per student) and vertical equity (dollars based on the needs of students). The formulas become increasingly more complex to accommodate greater scenarios of equity.

*Flat grant.* A flat grant is where funds are distributed to districts regardless of their ability to raise tax dollars. These grants are normally distributed in two methods, a grant based on a uniform need (per pupil) or a grant based on weighted needs (Wood, 2007).

*State-support program.* The concept of state-support programs is that all dollars are collected and distributed by the state. Therefore, wealth neutrality exists within the state. The ability to raise local funds plays no role in the collection or distribution of funds. This model is used in Hawaii, as it has only one school district. Utah has adopted a hybrid of this program in which the state dictates the amount of the tax levy and then collects any funds that a district receives above the funding level for redistribution (Wood, 2007).

*Equalization aid programs.* Several equalization of state aid plans exist including minimum foundation plans, resource accessibility programs, and combination programs. These programs attempt to take into account special student populations such as English language learners or special education students (Wood, 2007).

### Illinois Current General State Aid Formula

This section provides a general overview of the Illinois GSA grant's four tiers. The reader is directed to the ISBE website for a full analysis of the grant and the formula.

The GSA formula has three separate tracks for school districts depending on the availability of local wealth. These tracks are the foundation formula, the alternative formula, and the flat grant formula. Each formula has a slightly different calculation to provide GSA funding. "The goal of the formula grant is to assure that every school district has a minimum of the Foundation Level of funding for each student through a mix of state and local funds" (EFAB, 2013, p. 3).

The state begins the GSA process by adopting a foundation level, which is considered to be the minimum amount of funding to adequately educate a pupil. In 1997, Public Act 90-548<sup>23</sup> created the Illinois Education Funding Advisory Board (EFAB), whose statutory charge was to make recommendations for the foundation level and for the supplemental GSA grant level to the General Assembly. It is important to understand that the General Assembly adopts a foundation level that may or may not be the EFAB recommended level. In 2013, the adopted foundation level was \$6,119 per pupil; the EFAB recommendation was the 2012 recommendation (indexed by inflation), \$8,561 per pupil (See Table 1).

---

<sup>23</sup> P.A. 90-548

*Foundation formula.* The foundation formula is used if local funds raised are less than 93% of the total needs. The formula is:

$$\text{GSA Foundation} = (\text{Foundation Level} - \text{Available resources}) \times \text{Average Daily Attendance (ADA)}$$

If a district with an average daily attendance (ADA) of 100 pupils had \$4,000 of available resources per pupil for 2013, the practical application of the formula would be:

$$\$211,900 = (\$6,119 - \$4,000) \times 100$$

*Alternative formula.* The alternative formula is used when local funds are at 93% but less than 175% of the foundation level. That formula is:

$$\text{GSA Alternate} = \text{Foundation level} \times .07 - \left( \text{Local Percentage} - \frac{.93}{0.82} \right) \times (.02 \times \text{ADA})$$

If a district with an ADA of 100 pupils has \$6,184.02 of available resources, or 1.010626% of the foundation level per pupil for 2013, the practical application of the formula would be:

$$\begin{aligned} \$41,670.00 = & \text{TRUNC} \left( 6119 * \left( 0.07 - \right. \right. \\ & \left. \left. \text{TRUNC} \left( \left( \text{TRUNC} \left( \left( \frac{\text{TRUNC}(\text{ROUND}((1.010626 - 0.93), 4), 4)}{0.82} \right) * 0.02 \right), 4 \right) \right), 2 \right) * 100 \right. \end{aligned}$$

*Flat grant.* The final formula is the flat grant, which is utilized for districts when the ability to raise local funds is greater than or equal to 175% of the foundation level. This formula is:

$$\text{ADA} \times \$218.00$$

The practical application of the formula would be:

$$\$21,800 = 100 \times \$218.00$$

Table 6 shows the financial level of support by formula that districts received in 2013 reported by EFAB (2013).

Table 6

2013 GSA Categories of Support

Equalization Formula Grant per Pupil	Number of Entities	Formula Claim Amount	Students in Average Days of Attendance
Foundation Level			
\$6,000-6,119	0		
\$5,000-5,500	6	\$47,430,179	9,127
\$4,500-5,000	35	181,349,031	38,653
\$4,000-4,500	50	193,000,957	45,474
\$3,500-4,000	98	406,725,246	108,731
\$3,000-3,500	90	363,817,167	110,665
\$2,500-3,000	81	299,669,141	110,333
\$2,000-2,500	84	366,687,562	163,337
\$1,500-2,000	62	245,557,003	135,048
\$1,000-1,500	60	586,328,202	489,438
\$428.34-1,000	54	90,386,355	137,746
Alternate Method	170	171,012,085	443,491
Flat Grant	72	23,485,251	107,731
ROE Programs & Lab Schools	79	35,439,963	5,792
Total	941	3,010,888,141	1,905,565

Note: Districts receive the difference between the foundation level and their local resources per pupil.

*Poverty grant.* The second portion of the grant is the poverty grant. This funding is the equalization factor of the grant. This is the part of the GSA process that attempts to bring some vertical equity to the grant. This grant is awarded by the percentage of low-income students in a district. Low-income students are categorized as those who receive services from the Illinois DHS through one of four programs: Medicaid, the Children's Health Insurance Program, and Temporary Assistance for Needy Families (food stamps). This portion of the formula is not equalized, meaning that it does not consider the local wealth of a district. The amount paid per low-income pupil increases as the percentage of students in a district increases. Districts with equal or less than 15% of qualified pupils receive \$355 per pupil. All others receive a grant amount based on the following formula:

$$(\% \text{ of low - income students})^2 \times \$2.700 + \$294.25$$

## Legal Review

### Equal Protection and Equity Challenges

The primary source of educational funding is through local property taxes, which vary in size and wealth and, therefore, so does funding for school districts. There is a huge disparity in per-pupil expenditures between districts and between states. This disparity has led to equity challenges regarding funding. These equity challenges have been based on equal protection clauses of state constitutions or the federal constitution. The fourteenth amendment of the U.S. Constitution<sup>24</sup> states that every person should have equal protection

---

<sup>24</sup> U.S. CONST. art. XIV, § 1

under the law. In order to understand how this clause effects education, one must understand the amendment in historical context.

Some funding equity challenges can trace its roots to racial educational segregation. In 1849, in the Massachusetts case *Roberts v. City of Boston*,<sup>25</sup> the ruling supported that local officials had the right to the control of local schools and that segregated schools did not violate students' rights. This ruling helped establish racial educational segregation within the United States. The U.S. Supreme Court decision in *Plessy v. Ferguson*,<sup>26</sup> in 1896, upheld segregation of the races, but also introduced the concept of "separate but equal." This concept stated that facilities could remain segregated, but those facilities must be equal.

In 1899, in *Cummings v. Richmond County Board of Education*<sup>27</sup>, the first "separate but equal" school funding case was heard. Springboarding from *Plessy*,<sup>28</sup> a case was filed in Georgia regarding equal educational facilities. The suit argued that a school tax levy was illegal because there was a white-only secondary school and no secondary school for minority students. The school board argued that it could not afford to operate two schools. The original decision was not an injunction on the tax levy but on the school board from using funding at the secondary level. The Georgia Supreme Court reversed this decision because the lower court erred in the injunction against the board of education. When the case was taken to U.S Supreme Court, the Court denied that it had any jurisdiction to interfere with the decision, maintaining that education was based on state taxes and therefore a state matter.<sup>29</sup>

<sup>26</sup> 163 U.S. 537 (1896), 549

<sup>27</sup> 175 U.S. 528 (1899)

<sup>28</sup> 163 U.S. 537 (1896)

<sup>29</sup> 175 U.S. 528 (1899), 545

In 1954, the U.S. Supreme Court reversed the *Plessy*<sup>30</sup> decision. In *Brown v. The Board of Education of Topeka*,<sup>31</sup> the court stated, “separate educational facilities are inherently unequal.” Chief Justice Warren stated in his opinion:

Today, education is perhaps the most important function of state and local governments. Compulsory school attendance laws and the great expenditures for education both demonstrate our recognition of the importance of education to our democratic society. It is required in the performance of our most basic public responsibilities, even service in the armed forces. It is the very foundation of good citizenship. Today it is a principal instrument in awakening the child to cultural values, in preparing him for later professional training, and in helping him to adjust normally to his environment. In these days, it is doubtful that any child may reasonably be expected to succeed in life if he is denied the opportunity of an education. Such an opportunity, where the state has undertaken to provide it, is a right, which must be made available to all on equal terms.<sup>32</sup>

This case enlarged the legal scope of equity challenges from equal facilities to financial equality.

A landmark California case, *Serrano v. Priest*<sup>33</sup> in 1971, set the precedent that education could be considered a fundamental right. In this case, the court decided that education was a fundamental interest and that wealth was a suspect class. The court found that the funding system for California discriminated against the poor and violated the state’s equal protection clause. This case inspired litigation in almost every state, and in 1973, the fundamental right concept was taken to the Supreme Court.

<sup>33</sup> 487 P.2d 1241 (Cal. 1971), 589

### The Federal Fundamental Right Challenge

The fundamental right concept was taken to the Supreme Court in *San Antonio Independent School District v. Rodriguez*.<sup>34</sup> The basis for this case was the Texas school finance system. The plaintiff claimed the system favored wealthy communities and therefore violated the equal protection clause of the U.S. Constitution. In this case, the Supreme Court decided that the Texas financing system did not interfere with any fundamental right or liberty under the U.S. Constitution. The Court noted that education is a state service and therefore should be addressed at a state level.

The decision in this case closed education equity challenges at the federal level and moved school financing challenges to the state level. The move to state courts for equity challenges has produced inconsistent results, as each decision is unique to that state (Umstead, 2007). In equity challenges, defendant states won approximately two-thirds of all cases. The inconsistent results and failure of these cases helped to move the funding legal challenges from equity to adequacy (National Education Access Network, 2010).

Equity challenges face an uphill battle. The nature of the argument is to polarize wealthy and poor districts along with an effort to unite education at the state level. The polarization of districts increases the fear that a positive decision for equity will produce winners and losers. While poorer districts envision greater funding and opportunities increasing, wealthier districts envision losing the same. The efforts to unite education at a state level also exacerbate the fear of losing local control. Although many communities espouse altruistic ideals, making those ideals a reality at the cost of the community is difficult

---

<sup>34</sup> 411 U.S. 1 (1973), 28-29

if not impossible to accomplish. Reynolds (2008) noted that some communities willfully underfund education and that this was a “sinister” side to local control (p. 193). These reasons, along with the 1980s standard-based reform movement, helped to bring the adequacy issue to light (Rebell, 2010).

The standard-based reform movement turned the focus to student outcomes and fueled a new thought process regarding challenges to school-funding formulas. The challenge would no longer be based on the equal protection clause, but on the educational clause itself; instead of focusing on equal funding, it would focus on equal opportunity (Heise, 1998). There are two basic strengths to the argument: sympathy and quantifiable measurements. The adequacy argument’s primary strength is sympathy for children receiving an adequate education. This allows the court to focus on the child rather than equal funding, taxation, and expenditures (Jensen, 1997). This argument is far more acceptable to communities than the equity arguments. The second strength is that student outcomes are quantifiable and can be measured, which provides the court with a judicially manageable standard. Since the federal constitution does not have an education clause, these challenges must take place at the state level.

#### Pertinent Adequacy Cases

*Robinson v. Cahill*<sup>35</sup> was decided only 13 days after *Rodriquez*. It is notable that the opinion was written before the *Rodriquez* decision was published. In *Robinson*, a New Jersey court found that the funding system was unconstitutional, and that it violated the equal

---

<sup>35</sup> 303 A 2d 273 N.J. (1973)

protection mandate as it “discriminated against students in poorer districts and also discriminated among taxpayers.”<sup>36</sup>

In 1985, a coalition of school districts challenged the Montana financing system in *Helena Elementary School District No. 1 v. State*.<sup>37</sup> The Montana education clause provides some very strong language: “developing the full educational potential of each person. Equality of educational opportunity is guaranteed to each person of the state.”<sup>38</sup> The court found that “the system of funding violates Article X”<sup>39</sup> and declared the financing system unconstitutional. It went on to specifically note that were differences in funding of 8 to 1 in similarly sized districts. It also noted that the wealthier schools had better curriculums, textbooks, and instructional supplies.<sup>40</sup>

In 1989, the Kentucky Supreme Court decision in *Rose v. Council for Better Education*<sup>41</sup> invalidated the state’s school finance system based on adequacy concerns. “In a word, the present system of common schools in Kentucky is not an ‘efficient’ one in our view of the clear mandate of Section 183. The common school system in Kentucky is constitutionally deficient.”<sup>42</sup> This adequacy case moved adequacy significantly forward because the Kentucky court outlined measurable standards of what would constitute an efficient system. The seven standards were:

(i) sufficient oral and written communication skills to enable students to function in a complex changing civilization; (ii) sufficient knowledge of economic, social and political systems to enable the student to make informed choices; (iii) sufficient understanding of governmental processes to enable the student to understand the

<sup>36</sup> *id.*, 276

<sup>37</sup> 769 P.2d 684 (1989)

<sup>38</sup> Montana Constitution, Article X, § 1

<sup>39</sup> 769 P.2d 684 (1989), 47

<sup>40</sup> *id.*, 49

<sup>41</sup> 790 S.W.2d 186 (1989)

<sup>42</sup> *id.*, 189

issues that affect his or her community, state and nation; (iv) sufficient self-knowledge and knowledge of his or her mental and physical wellness; (v) sufficient groundings in the arts to enable each student to appreciate his or her cultural and historical heritage; (vi) sufficient training or preparation for advanced training in either academic or vocational fields so as to enable each child to choose and pursue life work intelligently, and (vii) sufficient levels of academic or vocational skills to enable public school students to compete favorably with their counterparts in surrounding states, in academics or in the job market.<sup>43</sup>

Two questions remain in this successful adequacy case: will the long-term changes to the financial system produce improvement to student outcomes? Will those outcomes be able to be directly connected to the changes in the funding formulae?

### Pertinent Illinois Court Cases

In 1877, the Illinois Supreme Court heard a case from Champaign County, *David G Fisher v. The People of Illinois*.<sup>44</sup> A taxpayer contended that school trustees were not a competent authority to levy taxes. The school district had been created by the township with the express purpose of building a schoolhouse and supporting the school. The taxpayer, however, argued that the school district levying taxes was another purpose altogether. The Illinois Supreme Court decided in favor of the school district, stating that it was a competent authority. When the power is given to create a school, it is implied that authority is given to execute the project.<sup>45</sup>

In 1879, the Illinois Supreme Court heard a LaSalle County case. A taxpayer challenged the county treasurer regarding a school tax for a high school. In *Richard v.*

---

<sup>43</sup> id, 212

<sup>44</sup> 84 Ill. 491 (1877)

<sup>45</sup> id., 492

*Raymond*,<sup>46</sup> the taxpayer claimed that the statute which authorized the establishing common schools was in conflict with the constitutional mandate to provide free schools. The court noted that a free public high school was a “common school” and that no particular course of studies constituted a common school education. The Court upheld the tax levy and the collection of the tax.<sup>47</sup>

By 1899, schools in Chicago were struggling with a lack of funding. The Teachers Federation researched the issue as it directly affected their salaries and found property assessment abuse at a corporate level. After a proceeding was begun against the assessment board, the board attempted to adopt new rules, which would result in corporations being given light assessments. A decision in favor of the Federation was determined, and the corporations were reassessed at higher values. The resulting taxes were taken to court and went to the federal level in *The Chicago Union Traction Co. v. The State Board of Equalization*.<sup>48</sup> The court found in favor the State Board of Equalization.

In 1968, the *McInnis v. Shapiro*<sup>49</sup> equity claim stated that a funding system based on property tax was in violation of the fourteenth amendment equal protection and due process clause. The plaintiff’s claim was that the variations in student per capita had deprived them of a good education. In addition, the plaintiffs wanted educational funds distributed based on educational need. The court dismissed the case because the fourteenth amendment did not require an equal per-pupil expenditure. It also noted that the variations did not result in “invidious discrimination.” One specific concern stands out in the court’s decision. The

---

<sup>46</sup> 92 Ill. 612 (1879)

<sup>47</sup> 92 Ill. 612 (1879), 615

<sup>48</sup> 112 F. 607

<sup>49</sup> 293 F Supp. 327 (1968)

court held that there were no “judicially manageable standards” to determine educational needs and, therefore, educational funding.<sup>50</sup>

In 1973, in a case heard by the Illinois Supreme Court, *Blase v Illinois*<sup>51</sup> the plaintiffs held that the state of Illinois had primary responsibility for financing the public education system based on the education clause of the Illinois Constitution, and that the state was required to provide for not less than 50% of the funds needed to operate the public elementary and secondary institutions. After reviewing the history of the constitutional convention, the court affirmed the dismissal, holding that the disputed provision was intended to express a goal or objective, not to state a specific command.

In 1995, an adequacy case, *The Committee for Educational Rights v. Edgar*<sup>52</sup> challenged the legality of the Illinois financing system based on the inequity between district finances in Illinois. The plaintiffs argued that Illinois had failed to provide an “efficient system.” It was also argued that districts with little wealth could not provide a “high quality” education, especially in the area of at-risk students. The court rejected this claim relying on the *McInnis*<sup>53</sup> decision and re-stated that “efficient system” does not mean a system that guarantees parity of funding. The court further stated, “questions relating to the quality of education are solely for the legislative branch to answer,” and not one to be resolved in the courts.<sup>54</sup>

In a 1999 case, 11 East St. Louis families argued that the school district had failed to provide a “minimally adequate education”. In *Lewis E. et al, Appellees v. Joseph A.*

---

<sup>50</sup> id. 334

<sup>51</sup> 55 Ill. 2d 94; 302 N.E.2d 46; 1973 Ill. LEXIS 235

<sup>52</sup> 672 N.E.2d 1178 (1996)

<sup>53</sup> 293 F Supp. 327 (1968)

<sup>54</sup> 174 Ill. 2d 1; 672 N.E.2d 1178; 1996 Ill. LEXIS 113; 220 Ill. Dec. 166, 15

*Spagnolo*,<sup>55</sup> the plaintiffs argued that the buildings in the district were in “wretched disrepair,” and that the district had not provided the basic educational components such as teachers and textbooks. The complaint stated that the high dropout rate and low test scores proved that the district was not providing a “high quality” education. One very notable point in this case was that the Illinois State Board of Education had appointed a financial oversight panel to the district in 1994. This case was dismissed, stating again that the quality of education is not a “judicially manageable standard” and that it therefore belonged in the legislative arena.<sup>56</sup>

In 2008, *Chicago Urban League and Quad County Urban League v. the State of Illinois and the Illinois State Board of Education*<sup>57</sup> had three basic premises (National Education Access Network, 2010). Based on the Illinois Civil Rights Act of 2003, the claim first alleges that the funding formula is discriminatory in that it has a “demonstrable adverse” impact on African American students, Latino students, and other minorities. The second premise is that the formula violates the equal protection clause by failing to provide an “efficient system of high quality public educational institution and services.” There are two new components to the equal protection clause. The first is the No Child Left Behind<sup>58</sup> standards to provide a “judicially manageable standard” to determine if the state is providing a “high quality” education. The second is that the claim attacks the “primary responsibility for financing the system” clause, stating:

Since 2003, however, Illinois has ranked 49 out of 50 in state contributions to school funding. The state’s share of the revenue raised for public schools in Illinois has

---

<sup>55</sup> 186 Ill. 2d 198; 710 N.E.2d 798; 1999 Ill. LEXIS 666; 238 Ill. Dec. 1

<sup>56</sup> *Id.*

<sup>57</sup> <http://www.schoolfunding.info/news/litigation/ILComplaint.pdf> p.2

<sup>58</sup> 20 USCS § 6311

decreased steadily, spiraling downward from a one time high of 48%, over 30 years ago in 1976.<sup>59</sup>

The third premise is that it breaches the Uniformity of Taxation provision of the Illinois constitution. The Illinois Constitution states, “Taxes upon real property shall be levied uniformly.”<sup>60</sup> The claim hopes that the education clause will be considered a “non-delegable duty” and therefore all taxation for education will be considered state funding, rather than local funding. Since education traditionally has been funded locally, the court will have to determine that since the state is required to provide education, does the Illinois uniformity of taxation clause apply to schools (Reynolds, 2008).

The Illinois Court dismissed plaintiffs’ education adequacy claims because of the precedent set in *The Committee for Educational Rights v. Edgar*, in which the Illinois Supreme Court held that adequacy claims are not justifiable. Plaintiffs are considering an appeal to the Supreme Court to ask it to reconsider that precedent.

In March, 2010 a new lawsuit, *Carr v. Koch*<sup>61</sup>, was filed. The suit is based on the equal protection clause and alleges that property-poor districts must levy taxes at a higher rate than property-wealthy districts in order to raise the same dollars. This suit also references the GSA formula in particular, stating:

3. Each fiscal year, the State, by actions of the General Assembly and Governor, establishes a “Foundation Level” of financial support for each pupil in each district. The State’s education funding system “is designed to assure that, through a combination of State financial aid and required local resources, the financial support provided each pupil” in each district “equals or exceeds” the State-designated Foundation Level. 105ilcs5/18-8.05(A)(1).
4. In order to reach what the State has designated as the Foundation Level of per-pupil education funding, property-poor districts must impose on their taxpayers – at a

---

<sup>59</sup> <http://www.schoolfunding.info/news/litigation/ILComplaint.pdf> p.2

<sup>60</sup> Ill. CONST. of 1970, art. 1X, § 4

<sup>61</sup> 963 N.E.2d 244; 2012 Ill. LEXIS 94; 357 Ill. Dec. 291

minimum a statutorily specified tax rate. Property-rich districts need not impose the specified tax rate, but can secure sufficient revenue to achieve the State-designated Foundation Level of per-pupil education funding by imposing a substantially lower tax rate.

5. Not only are taxpayers in property-rich districts able to pay lower tax rates to achieve the Foundation Level of per-pupil education funding than taxpayers in property-poor districts, but many schools in property-rich districts also receive from the State an additional grant of per-pupil funding over and above the Foundation Level that is not provided to schools in property-poor districts. The state thus subsidized property-rich districts ability to tax their citizens at a lower rate<sup>62</sup> (pp. 1-2).

The remedy sought is that the Illinois education financing system is unconstitutional. There are questions that since the plaintiffs in the case are taxpayers and no students are included, whether the relief will only benefit property-poor taxpayers and not the students of those districts (National Education Access Network, 2010).

The defendants filed a motion to dismiss the complaint stating:

[It] must be dismissed for failure to state a claim under the equal protection clause based upon the decision in *Edgar*. Defendants also argued that the ILS did not eliminate local control of schools or the ability to tax property at different rates, and that the funding of public education is a matter for the legislature, not the courts, to address.<sup>63</sup> (p. 20)

This case was dismissed by the appellate court and the decision confirmed by the Illinois Supreme Court.

### Literature Summary

If we make the assumption that Illinois would prosper from a more educated workforce and that a good education is a desired ideal to the citizens, we must establish the components that interfere in establishing that ideal. Those individuals who have studied Illinois educational finance would not be surprised by the themes that emerge from this

---

<sup>62</sup> Id.

<sup>63</sup> Id.

literature review: that educational opportunity equity is based on funding equity, that districts' property wealth varies, that taxpayers may have objections to taxes, and that communities' perspectives of educational needs are different. In addition, there is an inherent inequity built in by having multiple organizational structures of school districts. Some taxpayers are paying educational expenditures levied by two educational levels, elementary and high, while other taxpayers are levied by one source, the unit school district, which serves both levels.

The literature also shows that approaching educational funding from a judicial standpoint has not been successful, whether addressing it from an equity or an adequacy perspective. The Illinois courts have continued to state that education is not a judicial issue, but rather a legislative issue.

The legislature has chosen to combat inequity with the use of the GSA foundation grant. However, the legislature has not appropriated enough funding to cover the school districts' claims for the past two years. This, along with no legislative guidance on how to handle the appropriation failure, has led to a proration of the claims. This proration fails to provide the minimum foundation level to many districts. This, along with inconsistency in the proration of Illinois grants, should theoretically should result in a larger disparity in funding.

What may be surprising to many groups is the length of time that we have been struggling with the same issues and the cyclical nature of the issues that we are struggling with. This is consistent with Easton's political model that inputs into the political system result in decision or output, and that output then cycles around to become input. If one studies

the historical view of Illinois education, one easily sees the cycle. The first phase of the cycle is to idealize education with the student in mind and follow this with a funding plan. The second phase is the taxpayer's objection to the funding plan. The third phase is that the legislature tries to placate the taxpayer by either moving funding around or reducing the funding. The fourth phase is that student educational opportunity inequity, at worst, increases, and, at best, continues at the prior level. This initiates the cycle again.

The interference comes in phase two and phase three of the political cycle: tax objections and reaction of the legislature to those objections. Any attempt to reduce and/or resolve school funding inequity must also address taxpayer equity and legislative issues. Therefore research must focus on a hand-in-hand approach focusing on equity for the taxpayer as well as equity for the students.

The first part of this research study attempts to verify the accuracy of the assumption that funding disparity is on the rise. It looks at the last year of funding to determine if equity has been reduced, increased, or remained stagnant using statistical equity data points. This data provides a baseline for the second portion of the study.

The second portion of this study addresses the taxpayer component. Incorporating districts into a countywide structure eliminates the multiple-organization structure and removes layered taxation structures. This study then uses equity statistics to determine if greater equity is achieved from countywide consolidation.

Finally, this study considers consolidation at the state level to determine how that consolidation would impact taxpayers.

## CHAPTER 3

### METHODOLOGY

This study provides a quantitative analysis of equity regarding three potential scenarios to fund the foundation level of education in the state of Illinois. The framework for the subsequent analysis is drawn from Berne and Stiefel's (1984), *The Measurement of Equity in School Finance*. The analysis also mirrors some aspects of Verstegen and Driscoll's (2008) work that appears in *Educational Opportunity: The Illinois Dilemma*. The Berne and Stiefel framework has been widely utilized in equity analyses. Verstegen and Driscoll's comprehensive study on Illinois provided a basis for how to apply equity for special populations within the three Illinois organizational types of elementary, high school, and unit districts. The study directly concerns itself with revenue sources rather than expenditures.

This study focuses on equity from two perspectives, the student and the taxpayer. As the primary goal of schools is to educate all students so that they can become contributing members of a community, equity to students is paramount. As Illinois chooses to finance schools through property taxes, the study also considers the taxpaying community as the key financial contributor to education. These two perspectives are interlocking and therefore need to be considered in any scenario that might be successful within the state.

## Problem and Purpose Overview

The proration of the GSA formula and the failure of ISBE to adopt the recommended foundation level of funding are leading to greater disparity in per-pupil funding. This study compares three scenarios to produce the adopted foundation level of funding. This study also investigates how those scenarios might impact equity to students and taxpayers in Illinois.

This study specifically examines data and information regarding 2011-2012 school year. This data is downloaded directly from the ILEARN system on the Illinois State Board of Education website.

The three scenarios are:

1. Consolidate the EAV within a county and utilize a uniform countywide tax rate to provide the foundation level of funding for school districts.
2. Move the state from a minimum foundation level formula to a state-support program utilizing a uniform tax rate for the state of Illinois. This would move the state of Illinois to a model similar to Utah in which the state foundation level would be raised by a state tax and redistributed to school districts eliminating the need for a GSA grant.
3. Apply an operational tax rate to school districts as currently organized to provide the minimum foundation level of support.

## Research Questions

1. What does a quantitative study of equity in Illinois reveal for the 2011-2012 school year?
2. If district revenues were combined into countywide level schools:
  - a. What would be the EAV per pupil range be at a county level?
  - b. What percentage of students would be impacted positively or negatively by the consolidation of EAV?
  - c. Utilizing the countywide consolidated EAV, what would the county uniform tax rate need to be to meet the adopted foundation level for the year?
3. How would countywide revenues impact equity in the state of Illinois?
4. If EAV was consolidated at the state level, what would the state uniform tax rate need be to provide the foundation level of funding for school districts within the state?
  - a. What districts and counties would have to return funds to the state for redistribution if EAV was consolidated at the state level? Alternately, what counties would receive additional funding?
  - b. What percentage of students would be impacted positively or negatively by a state consolidation?
5. What would be the operational tax rate for school districts as currently organized in order to generate the minimum foundation level of support?

## Population and Sample

### Ethics and Human Relations

There is no direct risk of harm to any participant in this study due to the fact that the data points that are analyzed are taken from school districts and not individuals. No specific pupils are identified in any of the per-pupil calculations. The research outcomes of this project may be used to assist legislators to correct inequities within the state of Illinois; therefore, this project may provide financial utility to some or to all school districts included in this project.

### Specification of the Population

The population that this study utilized is based on data drawn from the 102 counties and the entire population of Illinois school districts in the organizational structures of elementary, high school, and unit districts. The study includes 864 school districts for the 2011-2012 school year. Table 7 shows the organizational structure of the districts included in the study.

Appendix A provides a complete list of the districts included in the study listed alphabetically by county, type of district, and district name. Table 8 shows the organizational types that were not included in this study.

Table 7

## Districts by Organizational Structure, 2011-2012 School Year

Total	864		

Note: Type Code is utilized to identify types of district.

Table 8

## Organizational Types Eliminated from Study

ISBE Type Code	Administrative Organizational Name
30	Department of Juvenile Justice
40	Area or Vocational Center or State Designated Facility (member Districts)
41	Area or Vocational Center of State Designated Facility (one District)
60-63	Special Education Cooperatives
80	Other State Funded Schools
90	State Charter Schools
00	Regional Programs

Note: Information taken from ISBE (n.d.)

### Identification and Drawing of a Sampling Frame

As the goal of this study is equity within the state of Illinois, the sampling is nonrandom in that it will include all Illinois districts for which data is available. As such, the sampling frame can be considered a census of all school districts within the state of Illinois.

### Securing the Needed Data

Data for the study was secured by downloading it directly from the Illinois State Board of Education website. There was no need to work directly with the districts, as the data is in the public domain. The instrument that was utilized for the financial data download is the ILEARN system.

The systems employed for the student population are the ISBE eReport Card Public Site and the Illinois Report Card website. As with the ILEARN data, these data sources are

considered to be within the public domain. These two systems can be retrieved from <http://www.illinoisreportcard.com/Default.aspx> and <http://webprod.isbe.net/ereportcard/publicsite/getsearchcriteria.aspx>.

### Reliability

The data used in this study was downloaded directly from the Illinois State Board of Education. The downloaded data from the Illinois State Board of Education was assumed to be accurate, as it is data that is directly reported to the state by the various districts. A district may be excluded if the data is found to be unavailable or the data technically inaccurate and unable to be utilized.

### Software Utilized

The software instrument used to complete and analyze the data is Excel.

### Validity

#### Financial Data Validity

The financial data is audited by the Illinois State Board of Education as well as independent auditors and accountants as required by Illinois School code. Thus the data can be argued to be valid from a financial standpoint, given this level of oversight.

### Student Populations Validity

When considering per-pupil objects in analysis, an average is created with the implicit assumption being that all pupils receive the average the object examined. However, all pupils are not alike, and some pupils require more resources than others due to greater needs.

Therefore, when considering per-pupil objects, some weighting of students needs to occur.

As Jimenez-Castellanos and Topper (2012) note, “per-pupil weights represent the increase in spending these populations require in order to meet various outcomes, and they are added to the base cost (the minimum amount needed to educate students with no special needs)” (p. 182). By weighting students (according to research-based excess costs), vertical equity is incorporated into the analysis. Weighting students requires value judgments on which students should be included, but the generally accepted categories of students with greater needs are English language learners (ELL), special education students, and students with low-income backgrounds. This section discusses how a valid per-pupil weighted population is determined.

The student population data is taken from a combination of sources. The 2012-2013 Illinois District Report Card in the section titled Student Characteristics provides a tool for downloading a five-year trend in Excel. This download includes a percentage of the district’s population for English language learners (column titled as “English Learners (%)”), special education (column titled “with disabilities (%)”), and low-income students (column titled “Low income (%). This download also provides an attendance percentage number (column titled “attendance (%)”). This download identifies the special populations to be utilized in vertical equity for the study. The total enrollment number was then taken from the ISBE

eReport Card Public Site for the 2011-2012 report cards. From these percentages, a number was calculated from the enrollment data, with the formula being as follows:

$$\begin{aligned} & \textit{Total Enrollment} \times \textit{Special Population Percentage} \\ &= \textit{Number of Special Population student population} \end{aligned}$$

Table 9 provides a sample calculation for Will County in 2011.

It is important to note that the enrolled population is not necessarily in attendance at the district for the entire year. This is due to a variety of reasons that includes dropout rates, mobility rates (families that move between districts), chronic truancy, etc. In order to accommodate those issues, the attendance percentage was applied to calculate the average student population. The formula used to derive this information is shown below.

$$\begin{aligned} & \textit{Number of Special Population student population} \times \textit{Attendance Percentage} \\ &= \textit{Average Special Population} \end{aligned}$$

Table 10 shows a sample of this calculation for 2011 Will County.

Once the averages of each population have been calculated, the student level data is weighted. It should be noted that there are a variety of methods to determine a weighted student, as well as a variety of student concerns to be considered. As an example, one student may have an IEP due to a delay in reading, a disability requiring little intervention, whereas another student may have severe physical disabilities in addition to learning disabilities that require more intervention at a larger cost. Similarly, a larger district may have a larger population of special needs students and be able to serve those students more efficiently than a small district. A full discussion of the concerns and methods of weighting

students is beyond the scope of this dissertation, and the reader is encouraged to review the reports and information utilized in reaching the percentage applied. In reviewing the available literature and finding the wide range of percentages recommended, as well as percentages recommended on the grade level of the student, it was determined that value would be added to this dissertation by utilizing the same percentages as in prior Illinois research.<sup>64</sup> Therefore, the students will be weighted as follows: special education students will be weighted at 1.9, providing an additional 90% in funding;<sup>65</sup> low-income at 1.5,<sup>66</sup> providing 50% of additional funding; and English language learners at 1.5,<sup>67</sup> providing an additional 50% in funding. The final weighted enrollment formula is:

*Average Daily Percentage Enrollment*

$$\begin{aligned}
 & - \text{Average Daily Percentage Total Special Populations} \\
 & + (\text{Average Daily Percentage Population} \times 1.5) \\
 & + (\text{Average Daily Percentage Special Ed. Population} \times 1.9) \\
 & + (\text{Average Daily Percentage Low Income Population} \times 1.5)
 \end{aligned}$$

Table 11 provides a sample calculation of this formula for Will County.

---

<sup>64</sup> These are the same weighting that were used in “Educational Opportunity: The Illinois Dilemma by Deborah A. Verstegen and Lisa G. Driscoll, *Journal of Education Finance*, Vol. 33, No. 4 (SPRING 2008), pp. 331-351.

<sup>65</sup> For a full discussion on Special Education Funding, please see J. Chambers and T.B. Parrish “What are we spending on Special Education in 1999-2000 in the United States? (Palo, Alto, CA; Center for Special Education Finance, The Special Education Expenditure Project, 2004) Retrieved January 2, 2013 from <http://csef.air.org/publications/seep/national/AdvRpt1.pdf>

<sup>66</sup> Research on excess costs of educating low income children varies. Baker finds that low-income costs range from 35% to over 100%. See “The Emerging Shape of Educational Adequacy: From Theoretical Assumptions to Empirical Evidence”, *Journal of Education Finance* 30(3) (2005).

<sup>67</sup> For a full discussion on research methods and English language learners, please review “The Cost of Providing an Adequate Education to English Language Learners: A Review of the Literature” by Oscar Jimenez-Castellanos and Amelia M. Topper, *Review of Educational Research*, 2012 82 p.179. This review provides not only the ranges of recommended percentages but in addition the methods and the validity of those methods to reach that range.

It should be noted that although an average daily attendance (ADA) number can be downloaded directly from the ISBE ILEARN system, that system does not show percentages or ADA for special populations. In addition, the ADA download does not necessarily match the attendance percentage within the Illinois Report cards. It was determined that for the purpose of this study, greater accuracy would be obtained by choosing one system rather than attempting to match the same type of data from two systems. Therefore the ADA data from the ISBE ILEARN system was discarded in favor of the above calculation. For the purposes of this dissertation, the calculated number is referred to as average daily attendance percentage (ADAP) in order to differentiate it from the average daily attendance (ADA) number located within the financial data.

## Procedure and Data Analysis Section

### Question 1 and Question 3 Calculations

This part of the process is used to analyze comparable district equity for Illinois for the 2011-2012 school year. As part of the process, the entire state is broken down by elementary, high school, and unit districts. Districts are then combined into countywide schools and the data analyzed by the same statistics at that level to determine if greater equity is achieved by consolidation at the county level. Berne and Stiefel (1984) found that these statistical measurements were appropriate for analyzing equity in either a growth or a declining economy.

As noted in the student population portion of this chapter, vertical equity is incorporated into these calculations by weighting the following categories of students: ELL,

special education, and low-income. Several statistical measures are used to evaluate horizontal equity and wealth neutrality. For horizontal equity, these measures include the range, restricted range, federal range ratio, coefficient of variation, Gini coefficient, and McLoone index. Table 12 shows the statistics that will be utilized to analyze the state of Illinois equity.

#### Question 2a Calculation

If district revenues were combined into countywide level schools: What would be the EAV per pupil range be at a county level?

$$\frac{\sum \text{County Real EAV}}{\sum \text{County Average Daily Attendance Percentage}} = \text{County ADAP EAV}$$

#### Question 2b Calculation

What percentage of students would be impacted positively or negatively by the consolidation of EAV?

$$\text{if } (\text{County EAV Per ADAP} > \text{EAV Per AdAP}) = \text{Positive Student Count}$$

Table 13 shows a sample of the above calculations.

Table 12

## Data Analysis and Formulas Utilized

Term/Method of Calculation	Definitions	Formula	Utilization
<p>Coefficient of variation</p> <p>Calculated in Excel</p>	The square root of the variance of per-pupil objects divided by the mean per-pupil object.	<p>Standard Deviation = <math>\left[ \frac{\sum P_i (X_p - x_i)^2}{\sum P_i} \right]^{\frac{1}{2}}</math></p> <p>Coefficient of variation = <math>\frac{[\sum p_i (X_p - x_i)^2]^{1/2}}{\sum P_i}</math></p>	<p>The standard deviation measures the extent of dispersion of the cases in a distribution about its mean but is susceptible to changes in scale, and the correction to this is the coefficient of the variance.</p> <p>The smaller the coefficient (CV) represents greater equity. As the CV decreases, equity increases. Values of 0.05 or less are preferred.</p>
<p>Federal range ratio</p> <p>Calculated in Excel</p>	The restricted range divided by the per pupil object at the 5 <sup>th</sup> percentile of pupils.	<p><i>Restricted Range</i></p> <p><i><math>X_i</math> at or below, which 5 percent of the pupils lie</i></p>	<p>The federal range ratio is to correct for the effects of inflation.</p> <p>As the federal range ratio decreases, equity increases. Values of 0.25 or less are preferred.</p>

Continued on following page

Table 12 (cont'd.)

Term/Method of Calculation	Definitions	Formula	Utilization
Gini coefficient  Calculated in Excel	Shows how far the distribution of per-pupil objects is from providing each percentage of pupils (e.g., 5% of objects), based on the Lorenz curve.	$\frac{(\sum \sum  X_i - P_{ij}  P_i P_j)}{(\sum P_i)^2}$ $2M$	One of the advantages of the Gini coefficient is that it weights all students equally, not all districts.  As the Gini decreases, equity increases (see also the Thiel index). Values of 0.5 or less are preferred.
McLoone Index  Calculated in Excel	The ratio of the actual sum of per-pupil objects for pupils below the median to the sum of per-pupil objects that would exist if each pupil below the median were at the median per-pupil object.	$\frac{\sum P_i X_i}{\sum P_i (M_p)}$	The McLoone index is designed to assess equity where a foundation level of support is desired, but where those that wish to contribute more are free to do so. Therefore, it targets those districts under the median per-pupil object.
Range  Calculated in Excel	The difference between the highest and lowest per-pupil objects in the distribution.	$Highest X_i - Lowest X_i$	This shows the difference between the highest and lowest object includes all objects but may be skewed by outliers.  As the range decreases equity increases.

Continued on following page

Table 12 ( cont'd.)

Term/Method of Calculation	Definitions	Formula	Utilization
Restricted range  Calculated in Excel	The difference between the per-pupil object at the 95 <sup>th</sup> and 5 <sup>th</sup> percentiles of pupils arranged in ascending order of per-pupil objects.	<i>X<sub>i</sub> at or above which 5% of the pupils lie – X<sub>i</sub> at or below which 5% of the pupils lie</i>	The goal of the restricted range is to eliminate the distortion caused by outliers the range.  As the restricted range decreases, equity increases. Values of 1.25 or less are preferred.
Standard deviation  Calculated in Excel	The standard deviation represents the extent of dispersion of the cases in a distribution about its mean.	$\sigma = \sqrt{\frac{\sum P_i (X_p - X_i)^2}{\sum P_i}}$	In a normal distribution, about one-third fall between the mean and one standard deviation above the mean and another third between the mean and one standard deviation below the mean.  Perfect equity would be indicated by zero. As the number rises, less equity is indicated.

Notes:  $P_i$  = number of pupils in a district;  $N$  = Number of districts;  $X_i$  = Average revenues (expenditures) per pupil in district;  $X_p$  = Mean revenue (expenditures) per pupil for all pupils;  $M_p$  = Median revenues per pupil for all pupils.

Table 13

## Will County Calculation of ADAP EAV and Student Impacts

Note: County EA per ADP = 196,266.41

Question 2c Calculation

Utilizing the countywide consolidated EAV, what would the county uniform tax rate be to meet the adopted foundation level for the year?

Foundation level tax rate Calculation:

$$(Real\ EAV \times Tax\ Rate) = Total\ Taxes$$

$$\frac{Total\ Taxes}{Average\ Daily\ Percentage\ Enrollment} = Foundation\ Level$$

Question 4a Calculation

If EAV was consolidated at the state level, what would the state uniform tax rate be to provide the foundation level of funding for school districts within the state?

$$(State\ Real\ EAV \times Tax\ Rate) = State\ Total\ Taxes$$

$$\frac{State\ Total\ Taxes}{Average\ Daily\ Percentage\ Enrollment} = Foundation$$

Question 4b Calculation

What districts and counties would have to return funds to the state for redistribution if EAV was consolidated at the state level? Alternately, what counties would receive additional funding?

$$if\ (County\ Total\ Taxes > (ADAP \times Foundation\ Level)) = Funds\ Returned\ to\ State$$

Question 4c Calculation

What percentage of students would be impacted positively or negatively by a state consolidation?

$$\text{if } (\text{State EAV Per ADAP} > \text{EAV Per AdAP}) = \text{Positive Student Count}$$

Question 5 Calculation

What would be the operational tax rate for school districts as currently organized in order to generate the minimum foundation level of support?

$$\begin{aligned} (\text{Real EAV} \times \text{Tax Rate}) &= \frac{\text{Total Taxes}}{\text{Average Daily Percentage Enrollment}} \\ &= \text{Foundation Level} \end{aligned}$$

## CHAPTER 4

### RESULTS

#### Data Triangulation

This study collected data from two separate ISBE sources, the Illinois Report Card and the ILEARN system. The data from these two sources were combined together. In the process of combining the data, some inaccuracies or inconsistencies in the data became apparent. These inconsistencies include unmatched data from source to source and unusual district structures.

The unmatched data has two structures. Structure one is shown in Table 14, which provides a list of districts that had data from the 2012 report card but had no financial data downloaded from the ILEARN system. A manual check of the ILEARN system confirmed that the data was not present within the system. In researching the ISBE Historical Archives for financial data, the 2010 EAV data was located on the 2011 Annual Financial Reports (AFR). The revenue data was located on the 2012 AFR. As these districts represented 23,818 weighted students, the data from these alternative sources was included to ensure a comprehensive study. Data utilized from this separate source will be identified within the tables marked as AFR. The EAV and revenue data for those districts has been included in the calculations and can be located under the district's Region County District Type (RCDT) code in the ISBE website at:

EAV: <ftp://ftpfinance.isbe.net/AFR/2011/School%20Districts/>

Revenue: <ftp://ftpfinance.isbe.net/AFR/2012/School%20Districts/>

Table 14

Districts with AFR Data

Date of AFR	County	RCDT Code	District Name
5/13/2013	Cook	06016088002	Bellwood SD 88
6/8/2012	Cook	06016089002	Maywood-Melrose Park-Broadview 89
11/3/2011	Jefferson	25041204017	Webber Township High School District 204
3/13/2012	St Clair	50082189022	East Saint Louis 189
12/7/2011	Whiteside	55098014002	Riverdale SD 14
10/21/2011	Moultrie	11070303026	Lovington CUSD 303
10/17/2011	Bureau	28006175004	Leepertown CCSD 175

The second structure of unmatched data is shown within Table 15, which identifies schools with student report card data and no financial base. These charter schools have attendance data available on the 2012 Illinois School Report Cards and may or may not have an RCDT number. However, the schools do not have the ability to levy taxes. It should be noted that some charter schools report their attendance data within other district structures rather than separately. This data has been included for student count.

Table 15

## Charter Schools with Student Data and no Financial Base

Type of School	County	RCDT Code	Name of District
Charter	Lake	N.A.	Prairie Crossing Charter School
Charter	Cook	07016901025 (001C)	Southland Prep

There is one unusual organizational structure which is a non-high school district. Chester N HSD 122 is the only non-high district remaining in the state of Illinois. This district was listed within the financial data but did not have a 2012 report card available and therefore had a zero student count. The definition of a non-high school district is a district that covers a portion of a county that is not serviced by either a high school or unit school district. The purpose of a non-high school district is to pay for tuition and transportation of its student base to nearby high school or unit school districts. This district is “co-extensive” with Prairie du Rocher Community Consolidated School District 134 and reports its attendance through that district.<sup>68</sup> The EAV utilized for Chester N HSD 122 covers the same as Prairie du Rocher Community Consolidated School District 124 and therefore when completing the state and countywide calculations, the EAV of this district was eliminated. Table 16 provides the data on this district.

<sup>68</sup> Kelton Davis, Regional Superintendent of Schools, Monroe-Randolph Regional Office of Education e-mail.

Table 16

## Non-High School District

Type	County	RCDT Code	Name of District
Non-High School	Randolph	45079122019	Chester N HSD 122

## Identification of Organizational Structures

Each district's organization type was identified from the 2012 Illinois School Report Card data. Figure 2 is a map representing the counties that have multiple organizational types.<sup>69</sup> It should be noted that with the current organizational structure, some EAVs are taxed twice, once by an elementary and then again by a high school.

Berne and Steifel (1984) recommend that when a state has multiple organizational structures (i.e., elementary, high, and unit districts), the best practice would be that the equity statistics be applied to each individual type (or program), rather than a combination of those types. Therefore, similar districts are compared: elementary to elementary, high to high, or unit district to unit district.

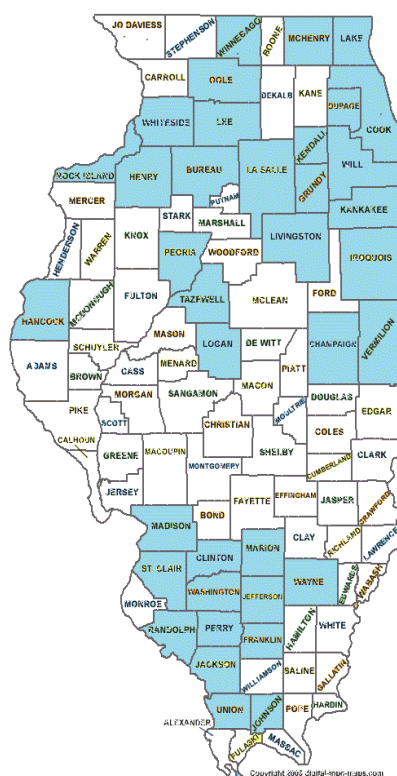

In this dissertation, the districts are combined into 102 countywide districts to examine the impact on equity. Once the districts are combined, the newly formed districts are then considered unit districts for the purpose of evaluation. Table 17 shows the count of organizational structures by type and county. Figure 2 shows the location of those districts.

Table 17

## County and Organizational Structure Count

	Elementary 2011-2012	High 2011-2012	Unit 2011-2012	County 2011-2012	State 2011-2012
Number of Districts	377	99	388	864	864
Number of Counties	38	38	102	102	102

Key	
Blue	Multiple Types of Organizational Structures
White	Unit Structures Only

Figure 2. Counties with Multiple Organizational Structures.

## Student Calculations

In order to account for vertical equity, three student groups were weighted resulting in an increase of 41% to the total student population in the state of Illinois. The complete calculations of the weighted student populations can be found in Appendices B, C, and D. Appendix E provides the weighted population sorted by organizational structure.

English Language Learners were weighted at 1.5, students with a disability were weighted at 1.9 and low-income students were weighed at 1.5. A full explanation of the weighted student process can be found in Chapter 3.

Weighting resulted in student increases of 39% at the elementary level, 29% at the high school level and 44% at the unit level and is shown in Figure 3. Table 18 shows the weighted distribution by organizational types. The change in percentage of students by organizational type was minimal with unit increasing approximately 1.5% and elementary and high schools each slightly reducing.

Figure 3. Weighted ADAP Compared with ADAP by Organizational Type.

Table 18

## Weighted Student Breakdown

Student Type	Weighted Student Count Percentage of Students	
General Education	550,903.62	19.99%
English Language Learners	272,518.07	9.89%
Students with Disabilities	505,013.47	18.32%
Low-Income	1,427,807.07	51.80%
Total students	2,756,242.23	100.00%

Figure 4 shows the increases by county which ranged from 18% to 65% increase. The weighting of students did change some counties in terms of that county's contribution to the total percentage of students within the state. Table 19 shows the weighted student breakdown by student type.

## Question 1

Question: What does a quantitative study of equity in Illinois reveal for the 2011-2012 school year?

When processing the data downloaded from ILEARN and checking the inconsistent data noted above, it was determined that the data from ILEARN is a mix of data from two separate years of Annual Financial Reports. Specifically, the revenue data is taken from the 2012 school year; however, the EAV data and operating tax rates are taken from the 2011 AFR and therefore represent the 2010 values for EAV and operating tax rates.

The data utilized in this dissertation focused on state and local revenue sources only. As the goal of the dissertation was to examine equity from a state perspective, federal revenue

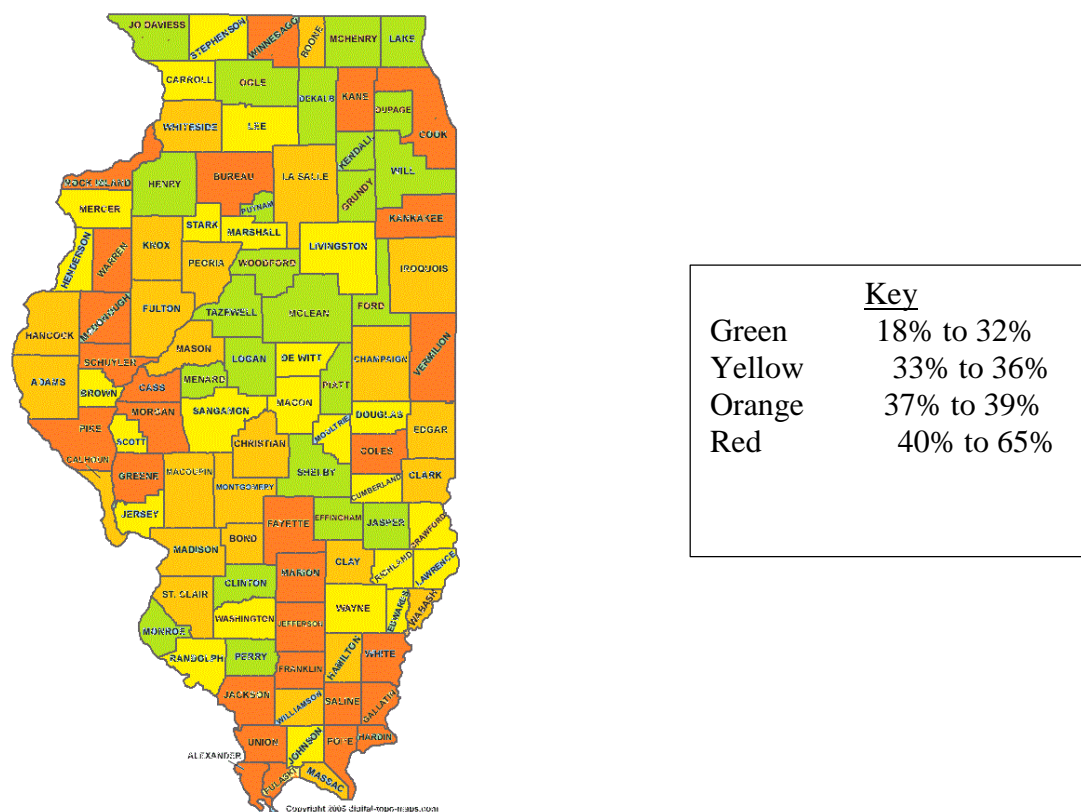

Figure 4. Weighted Student Increase by County.<sup>71</sup>

Table 19

Weighted Distribution by Organizational Type

	Elementary	High	Unit	Totals
Weighted ADAP	711,804.96	307,027.59	1,737,409.68	2,756,242.23
ADAP	512,769.74	237,960.73	1,199,517.27	1,950,247.74

<sup>70</sup> Copyright permission obtained from digital-topo-maps.com

sources were eliminated. This also acknowledges that federal programs are usually very specific in requirements and narrowly targeted for a specific population such as the Individuals with Disabilities Act (IDEA). Revenues were focused on because ISBE requires districts to file a balanced budget or to develop deficit reduction plans if the expenditures exceed revenues. Therefore, expenditures per student should not, in theory, exceed the revenue generating capacity of a district. As the ultimate goal of this dissertation was to examine equity from both a taxpayer and student perspective, the data needed to be examined to determine if it supported that goal.

When the data was reviewed, the local revenues and state revenues downloaded from ILEARN included all revenues from all funds, including debt service and capital projects. However, these funds may or may not directly impact the student's educational process, due primarily to the timing of the capital projects or when the debt was incurred. These funds impact the taxpayer because the total tax rate charged will include these funds. It was therefore determined to complete the equity measures for both all funds and then for operating funds only (eliminating capital projects and debt services). Therefore, a Freedom of Information Act (FOIA) was requested of ISBE to obtain the revenues by district by fund to eliminate the debt service numbers and capital expenditures for the 2012 year.

In addition, transportation revenue was removed from the calculation. Berne and Steifel (1984) recommended removing transportation as it is the expenditure least directly related to a student's education and is not necessarily supplied to all students or by every district.

Table 20 provides the equity measurement of the information downloaded from ILEARN and Table 21 provides the equity measurements of the figures from the FOIA request. The analysis that follows focuses on Table 20 as the operating revenues will be comparable with question five, which utilized the operational tax rate.

Table 20

## Equity Measurements for State and Local Revenues for all Funds

Measure	Elementary	High	Unit
	2011-2012	2011-2012	2011-2012
Range	27,189	19,382	10,147
Restricted Range	8,341	12,866	4,419

Gini Index	0.1973	0.1637	0.1148
McLoone Index	0.8313	0.8368	0.7991
Number of Weighted Students	711,804.96	307,027.59	1,737,409.68
ADAP	512,769.74	237,960.73	1,199,517.27
Number of Districts	377	99	388
Number of Counties	38	38	102

Table 21

## Equity Measures for State and Local Revenues on Operating Funds

	Elementary	High	Unit
Measure	2011-2012	2011-2012	2011-2012
Range	27,093	15,132	10,029
Restricted Range	7,962	12,452	3,766
Federal Ratio Range	1.70	1.85	0.70
Minimum	4,053	5,972	4,436
Maximum	31,146	21,105	14,465
Mean	7,809	11,681	6,849
Median	7,116	10,724	7,007
Co-efficient of Variable	0.4195	0.3251	0.2167
Gini Index	0.2028	0.1642	0.1074
McLoone Index	0.8087	0.8015	0.8753
Number of Weighted Students	711,804.96	307,027.59	1,737,409.68
ADAP	512,769.74	237,960.73	1,199,517.27
Number of Districts	377	99	388
Number of Counties	38	38	102

The findings show inequity in all organizational types. The range is the largest at the elementary level of \$27,093 with the maximum revenues raised at \$31,146 over the minimum of \$4,053 or 7.68%. The ranges are closer for both the high schools \$15,132 or 3.53% and unit schools \$10,029 or 3.26%. The restricted range eliminating the outliers of 5% at the lowest and highest revenues for elementary is \$7,962 lowering the ratio to 2.70%. High school is \$12,452 lowering the ratio to 2.85%. Unit schools are \$3,766 or 1.70%.

The McLoone Index is designed to measure a “foundation” level of support and therefore targets districts below the median level. A score of 1.00 equals perfect equity, all organizational types scored poorly in this area, being between .8087 and .8753. Unit districts being closer to meeting the median expenditure.

The Gini index indicates how far the distribution of the object is from providing each proportion of pupils with equal proportion of the object. This measure theoretically ranges from 0 to 1. As the Gini decreases, equity increases. Unit districts also score slightly better in the Gini Index than elementary or high.

The overall data confirms that none of the organizational types are equitable in revenue generating abilities, confirming that districts are reliant on local property wealth as the primary generator of revenues.

## Question 2

Question 2a: If district revenues were combined into countywide level schools: What would be the EAV per pupil range be at a county level?

The first step of the process is to eliminate any 2010 Real EAV that would be duplicated in those counties that have dual systems of elementary and high schools. In order to accomplish this elementary district EAV was eliminated, as all elementary students eventually attend either a high school or unit district. Appendix F provides details by county and district for this calculation.

This calculation resulted in a state EAV decrease from \$519,927,996,568 to \$358,398,142,839 or a total decrease of \$161,529,853,729. The adjusted EAV range was then used to calculate the EAV per ADAP and per Weighted ADAP for each county. Table 22 shows the resulting ranges for both the original (Real) EAV and the adjusted EAV. Figure 5 is a graphical representation of the data.

Table 22

## Countywide Consolidated EAV per Pupil

	ADAP Range		Weighted Pupil Range	
	Real EAV	Adjusted EAV	Real EAV	Adjusted EAV
Range	\$407,403	\$243,902	\$322,623	\$194,834
Minimum	30,771	30,771	19,844	19,844
Maximum	438,174	274,673	342,467	214,678
Mean	266,596	183,771	188,637	130,031
Median	340,482	226,640	224,011	149,112

Figure 5. Graphical Representation of Countywide Consolidated EAV per Pupil.

Figure 5 clarifies the strong impact of a dual taxation system. The ADAP calculations show how the range is reduced when duplicated EAV is removed. The mean EAV per pupil is reduced from \$266,596 to \$183,771 a reduction of 45%. The weighted calculation shows how student populations of greater need impact the per pupil distribution of EAV.

Question 2b: What percentage of students would be impacted positively or negatively by the consolidation of EAV?

This question proved more difficult to answer than originally intended due to the complications arising from removing dual EAV from the system. Technically, every student within the 38 counties that have dual taxation would be impacted negatively in the consolidation process. Equally so, there is a strong hypothesis that every taxpayer would be positively impacted by being obligated to pay one taxing body rather than two. In order to judge the problem accurately, it was determined that an “apple-to-apple” comparison should be made. Therefore the calculation was made assuming that the dual property taxation would remain in place. The usage of ADAP was chosen over weighted pupil count as the weighted count may vary from year to year based on the identification of the populations in question. The result is that a total of 66% or 1,819,655.78 students would receive an increase in EAV by the equalization of EAV in counties. In an overview of all 102 counties, thirty-six counties receive more negative impact rather than positive impact. A list of counties can be found in Appendix G.

Question 2c: Utilizing the countywide consolidated EAV, what would the county uniform tax rate need to be to meet the adopted foundation level for the year?

Countywide unit districts were formed and a tax rate was calculated for each student to reach the foundation level of funding using the ADAP to achieve horizontal equity. This resulted in the lowest tax rate being \$2.22 and the highest rate being \$19.88 with the range being \$17.65. The median rate was \$6.17 and the mean of the counties was \$6.88. Table 23 provides the statistics for the county foundation level tax rates. The frequency distribution is provided in Table 24 shows that the 80% of the counties are between \$3.00 and \$8.99 and 50% between \$4.00 and \$6.99. Figure 6 is a graphical representation of those tax rates. Appendix G provides a complete list of countywide foundation level tax rates.

### Question 3

Question: How would countywide revenues impact equity in the state of Illinois?

Table 25 provides a comparison of equity impacts using EAV as the defining component. EAV was chosen for the comparison based on the results of question one. The revenue raising capability is primarily dependent on this component and varies with the adopted tax rate of the district. Table 24 provides two separate comparisons, the first based on horizontal equity being achieved using ADAP and then with vertical equity being achieved using Weighted ADAP.

It is important to remember when reviewing Table 25 that the total EAV for the state has been adjusted or reduced by \$161,529,853,729 to account for the duplicated EAV found in the current structure of districts. Figure 7 provides a Lorenz curve for EAV by organizational structures. The blue line represents complete equality and the red line the distribution of the districts. The area between the two lines represents inequity. The Lorenz curve shows that greater equality would be achieved by the reduction of the dual taxation system and the consolidation into countywide EAV.

### Question 4

Question: If EAV was consolidated at the state level, what would the state uniform tax rate be to provide the foundation level of funding for school districts within the state?

This question required the utilization of the adjusted EAV referred to in question 2a. Appendix F provides details by county and district for this calculation. This calculation resulted in a state EAV decrease from \$519,927,996,568 to \$358,398,142,839 or a total

Table 25

decrease of \$161,529,853,729. The result of the computation for horizontal equity follows:

$$(\$358,398,142,839 \times \$0.0332969524521805) = \$11,933,565,921.06$$

$$\frac{\$11,933,565,921.06}{1,950,247.74} = \$6119$$

As the question was considered further, a computation was completed to determine a tax rate for vertical equity:

$$(\$358,398,142,839 \times 0.047057853471261) = \$16,865,447,245.60$$

$$\frac{\$16,865,447,245.60}{2,756,242.40} = \$6119$$

This translates into \$3.3296 or \$4.7057 per \$100 of assessed value.

Question 4a: What districts and counties would have to return funds to the state for redistribution if EAV was consolidated at the state level? Alternately, what counties would receive additional funding?

The complete calculation for these numbers can be found in Appendix H. Only six counties would send funding back to the state of Illinois: Cook, DeWitt, DuPage, Grundy, Lake, and Jo Davies returning a total of \$1,751,128,006 to be redistributed to other counties. See Table 26 and Figure 8.

In reviewing the organizational structures in regards to EAV alone, all organizational types see equity improvement at the consolidation level of the county and perfect equity is achieved at the state consolidation. Figure 9 shows the Lorenz curve for EAV at the state level with the red line overlapping the blue line indicating complete equity has been reached. Table 27 shows comparisons of EAV per pupil for the current distribution of EAV and the adjusted distribution for both countywide and statewide.

Table 26

Figure 9. Lorenz Curve for State EAV.

Question 4b: What percentage of students would be impacted positively or negatively by a state consolidation?

Seventy-one percent of students would either be neutral or receive a positive impact from the statewide distribution of EAV. A full list of student impacts can be found in Appendix I. Ninety-six counties out of the one hundred and two total would receive additional funding from the state of Illinois above those funds raised with the countywide EAV. These funds would be redistributed from six counties. A full list of the accounting of these counties can be found in Appendix H.

### Question 5

Question: What would be the operational tax rate for school districts as currently organized in order to generate the minimum foundation level of support?

Appendix J provides a complete list of foundation level tax rates. These rates were using the ADAP student data versus the weighted student data. The data in Table 28 shows that 359 or 41.55% of districts would be able to raise the foundation level for the ADAP number of students within their districts at rates below what the Illinois tax rate of \$3.3296. This leaves 505 districts or 58.45% of districts that would benefit from the state tax rate. The range of the tax rates is \$28.3708 with the minimum rate being \$0.2767 and the maximum rate being \$28.6476.

Table 28

## District Foundation Level tax rate Statistics

Figure 10. District Tax Rate Distribution to Reach Foundation Level Funding.

### Summary

All indices for the current structure in Illinois indicate funding inequities in all organizational structures. The data shows that Illinois is not wealth neutral and therefore student's education is a "zip-code lottery" in that it is dependent on local wealth. However, if districts were consolidated into countywide unit districts, equity in funding would increase. Complete equity is only achieved by the consolidation of EAV at a state level and applying a uniform tax rate. State consolidation would provide equity not only for the student, but for the taxpayer.

Figure 11 shows the shape of revenues across the cumulative percentage of students in Illinois. Horizontal equity would be achieved if all the bars on the graph were level. This

graph clearly shows that at least 20% of the students in Illinois did not receive adequate funding.

Figure 11. Revenues Over the Cumulative Percentage of Illinois Students.

This means that even after grants (horizontal and vertical) are distributed, the foundation level of funding for these students is not met. The matter is considerably worsened when the widening gap between the recommended foundation level and the adopted foundation level is considered as shown in Figure 12. This shows that Illinois is not even attempting to provide the EFAB (united view) level of funding or what is considered to be the minimum quality education.

Figure 12. Recommended Foundation Level Compared to Adopted Level.

It should be noted that the grant formulas and distribution are not necessarily the reason for the failure. Developing new and or amending the formula may increase some measures of equity, but will not eliminate inequity entirely. The real equity issue is not a distribution issue but a structural funding issue. ILEARN reported the following percentages of revenues for 2012.

Figure 13 clearly shows that local funds are the majority or the base revenues. The state attempts to achieve equity with only 26% of the revenues augmented slightly by 8% contributed by federal sources. However, equity cannot be achieved by the distributing 34% of the funding on top of a base of 66% that is distributed inequitably.

Illinois fails to provide equity to taxpayers as well. The current organizational structures of districts has a tax rate range of \$28.37. In addition, there is the added issue of dual taxation of some EAV versus the singular taxation to other EAV. This issue alone has multidimensional inequities to the taxpayer. Once again, the consolidation of districts into

countywide school districts would increase equity to the taxpayer and a uniform statewide tax rate produces complete equity.

Figure 13. Illinois State Revenues Reported by ILEARN

## CHAPTER 5

### DISCUSSION, CONCLUSIONS, AND RECOMMENDATIONS

#### Discussion

When one reviews the history of educational finance in Illinois, one is struck how education within Illinois has been ping ponged between those who advocate for a quality education and those who advocate for lower taxation. Illinois students' education has been caught in an eternal pushing and shoving match since statehood.

No one can truly fault the ideals that Illinois has espoused over the years in regard to education. The ideals have been consistently high since Pope's comment regarding education in the enabling act to the current text of the education clause in the constitution. It is only when the attempt is made to move those ideals from hortatory to reality that the backlash occurs.

#### The Historic Cycle

Figure 14 depicts the history of the Illinois educational funding cycle. The cycle begins with the adoption of a high ideal, followed by implementation, followed by a reversal of the ideal and the cycle is re-initiated. Once a high ideal is adopted, to fund the ideal, Illinois utilizes property tax. The utilization of property tax is a stable source of income, but the visibility of the tax makes its impact tremendous. As Strayer and Thorndike (1922) pointed out, school districts are in competition with other municipal concerns. Therefore the

taxpayer tends to compare the district tax rate with other municipal tax rates. School districts rarely fare well in this regard as it is one of the largest components of most tax bills. In addition, it is a service that all taxpayers have some personal experience with.

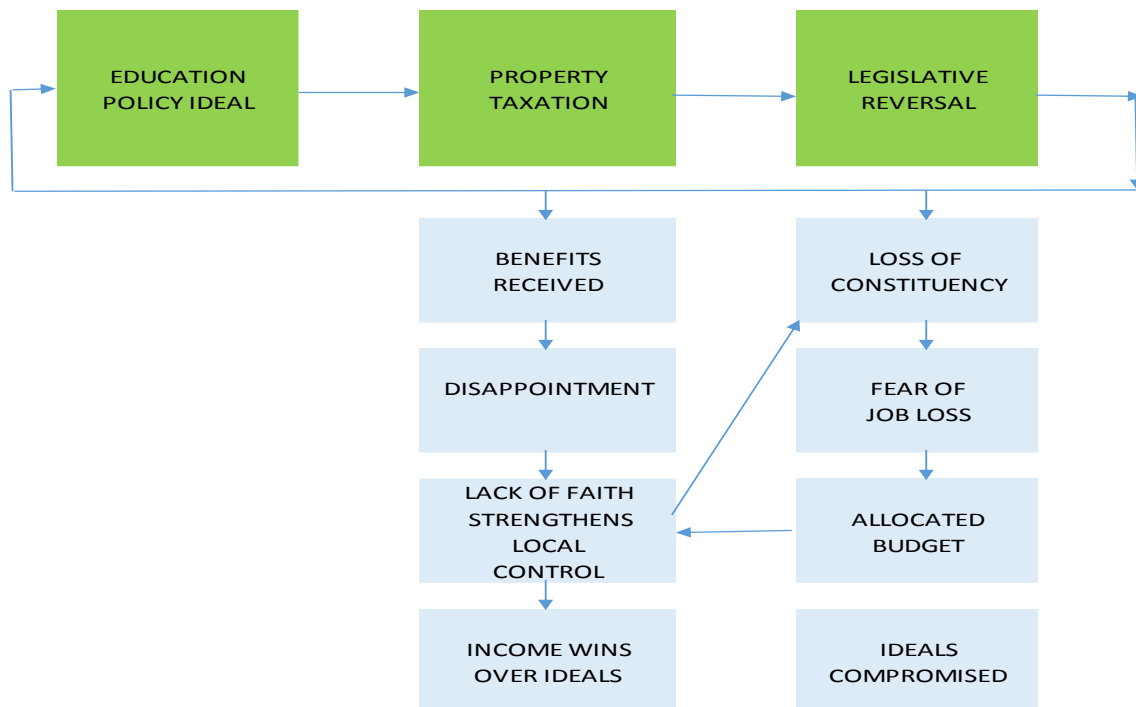

Figure 14. Illinois Historical Educational Funding Cycle

Taxpayers evaluate the tax rate with a “benefits received principle” approach. In reference to schools, this evaluation is made based on very specific private concerns and the question usually asked “Is the school meeting the needs and ideals of my family?” Parents look to see if specific programming is supported, such as music, gifted education, special education, sports, etc. If they believe the service is being provided, the rate is an acceptable

one, however if they are dissatisfied, the rate is not acceptable. Therefore, as the needs of the taxpayer and his or her children migrate, so does the taxpayer's opinion of the school and therefore the opinion of the tax rate required to support it. As Illinois has such high ideals, this evaluation often ends in dissatisfaction, which equals taxpayer disappointment. Once disappointed, taxpayers tend to compare the district to neighboring districts to determine if the provided services are equivalent and at what tax rate. Although, the district may be compared to either a more property wealthy or property poor neighboring district, this is not a factor usually considered. For the taxpayer, the evaluation more often than not results in the setting aside of ideals in favor of his or her personal pocketbook. This dissatisfaction with services and taxes is then pushed back to legislators.

Once the pushing and shoving enters the legislative arena, it often forces legislators into the unenviable position of choosing between an educational ideal for the state and the financial welfare of their constituents. This choice is heightened by the "Ogilvie choice" or how the decision will impact the legislator's own career. The response to this backlash has either been to acknowledge the shove by a reversal in support of the ideal or adoption of processes that allows legislators to quickly adjust to public pressure.

The adoption of an allocated budget versus a permanent tax was one of those processes and a second "death blow"<sup>72</sup> to education in Illinois. This, more than any other law, has resulted in masking the true costs in obtaining and maintaining an educational ideal. This system allows Illinois legislators the agility to move quickly in response to public pressures in regards to allocating funding. However, as the economy declines, it also allows or forces legislators to ignore some obligations in favor of others. Therefore, the more

---

<sup>72</sup> Pullman described the 1827 amendment to 1825 Free School act a "death-blow" in school funding.

publicly active groups or those groups with strong lobbyist receive the favorable allocations.

Those programs that have a disenfranchised or under-represented membership “lose favor”, as Fitts (2008) described it, and receive less funding. This leaves the Illinois allocations being based on the vicissitudes of those with public power. Even strongly committed legislators risk succumbing to public pressure and losing their long-term goals and ideals of equity.

A second unfortunate consequence of the allocated budget versus a dedicated tax is an increase to the taxpayer’s lack of faith. As there is no dedicated stream of taxes, taxpayers who might vote for an increase in taxation for the purpose of educational funding (or any other concern) are reticent to do so. There is no confidence that the increase will go to the taxpayer’s desired program, but more likely will be siphoned off to another concern.

This lack of faith at the state level has the additional impact of strengthening the belief in local control. The taxpayer then refocuses his or her attention on the control of the local school district. The proof of this can be seen in 864 separate school districts unwilling to consolidate and the willingness of taxpayers to participate in dual taxation systems. In fact, dual taxation systems may even be preferable to these taxpayers as it provides an even greater degree of control. Separate systems allow the taxpayer to focus his or her votes and funding on either elementary school or high school in response to what the taxpayer determines he or she needs.

### Interrupting the Cycle

The true struggle in Illinois is to devise a long-term plan that allows the educational ideal to be obtainable while implementing a neutral tax to the public. History teaches us that

there are three times when positive changes occur in educational funding and the cycle is broken. The first is the utilization of the judicial process, the second is when the economy is in a positive state, and the third is when a legislator runs on an educational platform.

Positive changes occur when the judicial process is initiated regardless of the outcome of the case or of the state that the case takes place in. As cases are filed, advocates look to those cases for guidance. *Brown v. The Board of Education of Topeka*,<sup>73</sup> enlarged the scope of equity cases from facilities to financial equity. The California case, *Serrano v. Priest*<sup>74</sup> brought forth numerous cases regarding education as a fundamental right. Another example is the Illinois case, *McInnis v Shapiro*,<sup>75</sup> where the court found in favor of the state because there were no “judicially manageable standards.” This case, however, helped to drive forward the standards based reform movement.

The second circumstance is that when the economic situation of the state improves so does equity. Prior to the 1969 adoption of a statewide income tax in Illinois, equity in school districts was declining. Hickrod (1976) found that the resulting increase to state revenues allowed more funding to be provided to schools and increased equity for approximately five years.

However, the most substantial changes occur when a legislator runs with a strong educational platform and has the support of constituents. This was the case when the baby boom generation entered into the school system, and there was a strong public support of education. This requires the leadership of a strong legislator who can stay true to his or her platform. This legislator must also communicate with the constituents in providing an honest

---

<sup>73</sup> 347 U.S. 483 (1954)

<sup>74</sup> 487 P.2d 1241 (Cal. 1971), 589

<sup>75</sup> 293 F Supp. 327 (1968)

appraisal of both the vision and the approach. Most importantly, this individual would need to develop the “political will” to make the vision a reality.

### The Polarization of Equity

Although the consolidation of EAV and the application of a uniform tax rate in both the countywide and statewide scenarios would provide increased equality, these scenarios are unlikely to develop the “political will” to initiate them. As was stated in the legal review, equity challenges tend to polarize communities. This results in pushing and shoving in that those with wealth fear losing it and those without wealth hope to gain it.

The statewide consolidation and the application of the uniform tax rate produced the greatest equality. Specifically, it would require the redistribution of funds within counties as well as requiring six counties to return funding to the state for redistribution. Those counties were Cook, DeWitt, DuPage, Grundy, Jo Daviess and Lake. Those counties would be unlikely to support a statewide initiative requiring the returning of funds and according to the U.S. Census Bureau (2013) those counties comprised 53% of the total population for the 2012 year. In Cook County, the city of Chicago alone represents 21% of the Illinois population. In addition, according to the data supplied by ISBE, those six counties received approximately 33% of the GSA funds distributed in 2012.

In considering consolidation, there may be a stronger “grassroots” issue. In a 1992 study based in Illinois, Ward and Rink found that the primary opposition to school district consolidation was expressed as “local control.” They found that the term “local control” was

multi-faceted in its utilization. The term was utilized to express issues of power, self-interest or a loss of identity.

In reference to power, they found that there was both a fear of losing power and of others gaining power. Board members feared losing their seats and voices at the schools. School employees were afraid of losing their positions and/or who would gain power. The superintendent that endorsed consolidation was accused of wanting a larger district for prestige and salary.

Parents expressed self-interest issues such as having to travel further to take a student to school, loss of sports opportunities to children, and fear of larger class sizes. In addition, the root cause for the opposition was a disdain for certain section of the community. Although the demographics of the districts were similar, both racially and economically, one section of the community was considered “lower class” and there was a strong resistance to having their students associate with this populace. The blending of the populations was seen as a loss of identity. In the financial sense, this was succinctly expressed as “using ‘our’ taxes to educate ‘their’ children. (Ward & Rink, 1992)

### Enlarging the Scope of Equity

Equity in Illinois can be looked at from several levels from the microscopic to the macroscopic. In a microscopic view, the GSA formula can be dissected. In striving for increased equity, several GSA formula changes have been recommended throughout the years. However, it seems unlikely, if not impossible, that Illinois will find equity simply within distribution formula changes. Assuming that the allocated funding level remains

consistent, each of the recommendations will have district winners and district losers. As can be seen by Illinois history, we know that communities are not stagnant. In our past, student populations have migrated from rural to city to suburbs, and in the future we may find that students will remain stagnant in a community while virtually commuting to other locations. Therefore, Illinois can reasonably expect that any formula devised will be subject to challenges and changes as the needs of the state's population changes or programs fall in or out of favor.

If we raise our perspective past the GSA formula to a district view, we find Illinois has and is continuing to add to the data available to the public. ISBE employs several systems, such as ILEARN, Illinois Report Cards, and Financial Profiles. These systems encourage comparisons at the district level. In fact, ILEARN has an option entitled "Quick Comparison" allowing the user to make comparisons on several levels including comparing one districts to another.

Comparisons at the state level are more difficult to locate and achieve. Clearly as economy is becoming more globally based, the scope of comparison should be enlarged. The public must be encouraged to seek and compare data from a state to state perspective and certainly from a state longitudinal perspective. Illinois has a strong vision or ideal of education, but that must be translated into goals that are specific and measurable. Illinois needs to adopt some specific and repeatable measurements with respect to the goals adopted.

## Research Conclusions

When reflecting on this research alone, it has three strengths. The strongest value added is to refocus and enlarge the view of educational equity to a state perspective versus a district level. This research attempts to provide a basis to create a public understanding of the equity and financial issues within Illinois schools. Hopefully, a clear definition of the issues will be a precursor to developing a publicly supported solution. In this study, the scenario for a statewide consolidated EAV and a uniform tax rate was adapted from the state of Utah. Many states have alternative methods to financing schools and researchers should be encouraged to look at applying those strategies to Illinois to determine if greater equity might be achieved.

The second strength is to encourage researchers who choose to study equity from a financial perspective to look at the process from both a student and a taxpayer's perspective. Again, looking from a global perspective, all studies that focus on providing students equal opportunity in education should be applauded. However, in financial equity studies, it should be encouraged to consider both the perspective of the student and the taxpayer to develop solutions that will not only reach the equity ideal for students, but provide some equity to taxpayers as well.

The third strength is that this study can be a base for other longitudinal quantitative studies. The state should have consistent benchmarks to determine if the state funding solutions are adequate.

The basic negatives to this research are data migration and consistency, the inclusion or exclusion of funding and the utilization of numbers to represent students. The first

consideration is data migration. The numbers utilized within this study were downloaded from ISBE. ISBE reporting requirements do change periodically and because of this some specifics within the numbers may migrate from one location to another within the reports. The annual financial data may also migrate based on the timing of state payments received. Finally as the data is reported by 864 separate entities, there may be inconsistency in how the ISBE requirements are interpreted and therefore reported.

The second is that the methodology in reaching a number can always be argued. As indicated in Tables 20 and Table 21 in chapter four, there may be some question as to what funds are included or excluded in the calculation of the numbers. The most prominent example is the reduction of transportation funding. Some students receive transport and others do not, so it is indeed equitable when considering student equity to eliminate it from the calculations. However, in reality, if a student cannot get to school due to distance, it is a necessary cost and one that can and is supported by taxpayers. A second example is the process of weighting students. There are many different process that can be utilized to weight students, from grade level, to services received, to a holistic approach as adopted by this research.

Finally in regards to reducing students to numbers, there is always a danger in dehumanizing individuals as well as minimizing the importance of their education.

### Research Practice Recommendations

It is recommended that researchers utilize two sources and triangulate the data. As was noted in Chapter 4, some inconsistencies were found within the data. However, more

accuracy was achieved by verifying the data. Although the data was downloaded from ISBE, there was no disclaimer on the data that some information may be missing. It was only through the use of two sources that the absence of data was located.

It is also recommended that whatever methodology is utilized within a study that it be documented in its entirety. As was noted early on in this study, the research could have utilized the Average Daily Attendance (ADA) on the financial data or take the data from the district report card. By documenting sources of data as well as the rationale for the choice of data, researchers allow the study to be repeated accurately or differences in studies to be acknowledged.

### Future Research

1. A review of processes to create a weighting system for students encapsulating special categories and grade levels that could be adopted statewide including a review of other states and incorporating standardized methods of student identification for each category.
2. A longitudinal study comparing grade averages to the funding available to the student at a grade school level.
3. A comprehensive study of the equity concerns in financing charter schools including how countywide or statewide consolidation of EAV and uniform tax rates would impact funding levels. The study should include the GSA annual allocation as well as be comprehensive enough to determine if consolidations would affect the formation and the availability of charter schools in the state.

4. A study to determine if specialized training of accounting personnel should be put into place at a district level for specialized costs and to ensure greater accuracy within state accounting.
5. A study to determine or develop standardized spreadsheets in equity calculations that could be utilized by future researchers to provide specific measurements regarding equity in the state.
6. A study to see how the debt service and capital improvements of individual districts could be included into a consolidation of districts either at a county or state level.
7. A study of how states are monitoring equity and analyzing the pros and cons of those systems.
8. The application of financing strategies from other states to Illinois to determine in equity would improve for either students or taxpayers.
9. A repeat of this study incorporating regional cost implications.
10. A repeat of this study at five-year intervals.

### Summary

#### The Data Dilemma

In the last several years the terms *financial transparency* and *data-driven decisions* have become the watchwords in school districts. However, there is a large difference between transparency (operating in a manner that others can clearly see the actions being performed) and clarity (having the ability to coherently comprehend those actions). Most school districts work hard to be good stewards of public funds and provide transparent

financial reports. However, providing more details and more data does not necessarily equate to providing more clarity.

As more data becomes available, there is a greater tendency to constantly compare and to at least match if not “outdo” neighboring districts. Unfortunately, most of the comparisons made tend to be from a private viewpoint regarding specific programming. The focus of the comparisons becomes very specific details of one district’s to another. As a result, the larger picture of the state as a whole becomes blurred. The forest cannot be seen due to the trees.

The greatest concern in school funding is how to develop that view of a “forest” or a public global viewpoint rather than only seeing the trees or the private concerns. The viewpoint must be enlarged from a district-to-district viewpoint to a state viewpoint.

### Illinois Inherent Inequities

When we consider Illinois educational finance, it must be acknowledged that Illinois continues to face a number of challenges that are the root causes of educational opportunity inequity. These root causes are built into the technical application of the system and have been identified for a number of years:

- Multiple organizational structures – identified in 1924.
- The supremacy of the school district and the consequent decentralized administration of schools and school finance. – identified 1925.
- Flat annual appropriations in lieu of a state school tax – began 1873.

- A two-tiered system of taxation for some districts, but not all districts – identified in 1925.
- Tax cap law is some, but not all counties – 1991.

Unfortunately, unless these structural issues are addressed, Illinois will continue to have to make “legislative catch up attempts.” (Reynolds, 2008 p. 180), which will inevitably lead to further pushing and shoving between educational advocates and taxpayers and school districts.

### When Push Comes to Shove

The lack of progress from the pushing and shoving match or the failure to negotiate the desires of educational advocates with those of low taxation advocates can be seen in the comments of Swift and Matire which were made 89 years apart.

In 1925. Swift stated:

Illinois ranked in fourth in the Union with its ability to fund education and one of the smallest per-capita debt rate among the states, but was outranked by 22 states in expenditures per student. (p.3)

In 2014 Matire stated:

Illinois – despite having the 5th largest population and economy of any state – ranks dead last in the nation in the portion of school funding covered by state, rather than local funding.

If we continue with the premise that the three circumstances in which educational funding is increased (and therefore more equity is achieved) are by utilizing judicial challenges, during a strong economy, or by strong legislative leadership, the future of Illinois education is bleak.

The *San Antonio Independent School District v. Rodriguez*<sup>76</sup> case firmly removes education as a national battle and places it at the state level. In Illinois, the judicial response has resulted in the pushing and shoving between the branches of government. In general, the courts of Illinois have not historically interpreted the laws or constitution favorably in regard to equity or adequacy in education. With regard to the Illinois constitution, they have determined that it is a document that expresses a “goal” and not a specific command.<sup>77</sup> Illinois courts have also firmly stated that “questions relating to the quality of education are solely for the legislative branch to answer,”<sup>78</sup> and not one to be resolved in the courts.

Although the economy may have begun some recovery since the housing bubble burst, it cannot be considered strong. Personal per-capita income for Illinois has dropped 10 positions in the nation between 1996 and 2012. In 2012 it ranked sixteenth in the nation (Bureau of Business and Economic Research, 2012).

The 2010 census showed that Chicago, Illinois was one of the top five most populated cities in the United States. The census also reported that the United States population is an aging one:

The population aged 45 to 64 grew at a rate of 31.5 percent. The large growth in this age group is primarily due to the aging of the Baby Boom population. Finally, the population aged 65 and over also grew at a faster rate (15.1 percent) than the population under age 45. (U.S. Census Bureau, 2011)

As Hoffman (1981) noted the regressive nature of property tax becomes more apparent and significant for retirees. As more of the Illinois population retires and relies on a fixed income, it is doubtful that tax increases in any form will be supported. The tendency to

---

<sup>76</sup> 411 U.S. 1 (1973), 28-29

<sup>77</sup> 55 Ill. 2d 94; 302 N.E.2d 46; 1973 Ill. LEXIS 235

<sup>78</sup> 174 Ill. 2d 1; 672 N.E.2d 1178; 1996 Ill. LEXIS 113; 220 Ill. Dec. 166, 15

evaluate tax rates on the “benefits received principle” may be a specific concern as the number of childless households on fixed income increases.

If one still doubts that the future of the Illinois economy is dubious, one needs to only refer to Governor Quinn’s 2015 budgets where he felt the need to include a recommended budget (based on income tax increases staying in effect) and non-recommended budget based on the lowering of the income tax rate (ISBE, 2014). This non-recommended budget is now be referred to in the press as the “doomsday” budget. In a recent email, Ralph Matire (2014) of Center for Tax and Budget Accountability defined the Illinois financial issue:

The bad news is: the state's ongoing "structural deficit" has prevented Illinois from making adequate investments in any of the four core services for decades. A "structural deficit" exists when, adjusting solely for inflation and population growth, tax revenue won't increase at a rate sufficient to maintain current service levels from one year to another, even during periods of normal economic growth.

This leaves Illinois looking for a hero in the legislative process, which will only be obtained by developing a strong constituency that can stand firm on the educational values. This will be no small task, as it will require overcoming the polarization of equity. The individual will have to enlarge the public's view of community and developing a fraternity of state citizenship versus local citizenship.

The future of equity in Illinois educational opportunity is indeed bleak, unless Illinois either invests a significant amount of funding to equalize educational funding or invests in significant effort to repair the structural faults. Without these efforts, it appears that Illinois will be doomed to repeating its historic cycle and making little progress in equalizing educational opportunities for students and equity for taxpayers.
